Real-World Algorithms Panos Louridas, 2017-03-17 An introduction to algorithms for readers with no background in
advanced mathematics or computer science emphasizing examples and real world problems Algorithms are what we do in
order not to have to do something Algorithms consist of instructions to carry out tasks usually dull repetitive ones Starting
from simple building blocks computer algorithms enable machines to recognize and produce speech translate texts
categorize and summarize documents describe images and predict the weather A task that would take hours can be
completed in virtually no time by using a few lines of code in a modern scripting program This book offers an introduction to
algorithms through the real world problems they solve The algorithms are presented in pseudocode and can readily be
implemented in a computer language The book presents algorithms simply and accessibly without overwhelming readers or
insulting their intelligence Readers should be comfortable with mathematical fundamentals and have a basic understanding
of how computers work all other necessary concepts are explained in the text After presenting background in pseudocode
conventions basic terminology and data structures chapters cover compression cryptography graphs searching and sorting
hashing classification strings and chance Each chapter describes real problems and then presents algorithms to solve them
Examples illustrate the wide range of applications including shortest paths as a solution to paragraph line breaks strongest
paths in elections systems hashes for song recognition voting power Monte Carlo methods and entropy for machine learning
Real World Algorithms can be used by students in disciplines from economics to applied sciences Computer science majors
