Translational Research Methods for Diabetes, Obesity and Cardiometabolic

Drug Development Andrew J. Krentz, Lutz Heinemann, Marcus Hompesch, 2014-11-29 The world is beset by a pandemic of obesity and type 2 diabetes and the need for new drugs is startlingly clear recent years have seen a huge increase in research activity to fill this gap The development of new drugs for diabetes and obesity must be founded upon a sound appreciation of the pathophysiology of these common disorders The dual defects of insulin resistance and impaired insulin secretion are fundamental to the pathogenesis and progression of obesity associated type 2 diabetes There is a need to explain how new drugs can counter insulin resistance and insulin deficiency to a broad range of professionals from clinical scientists active in early and later phase drug development to specialist physicians and increasingly primary care doctors who must tailor drug regimens to the individual patient Clinical research methods for measuring insulin action and insulin secretion have become well established in proof of mechanism studies however selection of the best techniques is by no means straightforward The purpose of the book is to aid the selection of the most appropriate techniques for assessing insulin action insulin secretion and body composition in humans with particular reference to new drugs in phase 1 and 2 studies and aid the understanding of drug effects and non drug treatment strategies on key biochemical hormonal defects of obesity and type 2 diabetes The book will assume a working knowledge of human physiology relating to glucose metabolism and will be of interest to biomedical scientists pharmacologists academics involved in metabolic research and clinicians practicing in these specialties *Mathematical Statistics with Mathematica* Colin Rose, 2002 **The developing human**

brain Silvia A. Bunge, Elizabeth D. O'Hare, Technological advances in brain imaging genetics and computational modeling have set the stage for novel insights into the cognitive neuroscience of human development during childhood and adolescence As the field has expanded research in this area increasingly incorporates highly interdisciplinary approaches utilizing sophisticated imaging behavioral and genetic methodologies to map brain cognitive and affective social development The articles in this Research Topic will highlight both the recent advances and future challenges inherent in this burgeoning interdisciplinary field We invite both review articles and original research reports that consider any of the broad spectrum of topics within the field of developmental cognitive neuroscience *Modern Mathematical Statistics with Applications* Jay L. Devore, Kenneth N. Berk, Matthew A. Carlton, 2021-04-29 This 3rd edition of *Modern Mathematical Statistics with Applications* tries to strike a balance between mathematical foundations and statistical practice The book provides a clear and current exposition of statistical concepts and methodology including many examples and exercises based on real data gleaned from publicly available sources Here is a small but representative selection of scenarios for our examples and exercises based on information in recent articles Use of the Big Mac index by the publication *The Economist* as a humorous way to compare product costs across nations Visualizing how the concentration of lead levels in cartridges varies for each of five brands of e cigarettes Describing the distribution of grip size among surgeons and how it impacts their ability to use a particular brand of surgical stapler Estimating the true average odometer reading of used Porsche Boxsters listed for sale on

www cars com Comparing head acceleration after impact when wearing a football helmet with acceleration without a helmet Investigating the relationship between body mass index and foot load while running The main focus of the book is on presenting and illustrating methods of inferential statistics used by investigators in a wide variety of disciplines from actuarial science all the way to zoology It begins with a chapter on descriptive statistics that immediately exposes the reader to the analysis of real data The next six chapters develop the probability material that facilitates the transition from simply describing data to drawing formal conclusions based on inferential methodology Point estimation the use of statistical intervals and hypothesis testing are the topics of the first three inferential chapters The remainder of the book explores the use of these methods in a variety of more complex settings This edition includes many new examples and exercises as well as an introduction to the simulation of events and probability distributions There are more than 1300 exercises in the book ranging from very straightforward to reasonably challenging Many sections have been rewritten with the goal of streamlining and providing a more accessible exposition Output from the most common statistical software packages is included wherever appropriate a feature absent from virtually all other mathematical statistics textbooks The authors hope that their enthusiasm for the theory and applicability of statistics to real world problems will encourage students to pursue more training in the discipline

Practical Data Analysis with JMP, Third Edition Robert Carver, 2019-10-18 Master the concepts and techniques of statistical analysis using JMP Practical Data Analysis with JMP Third Edition highlights the powerful interactive and visual approach of JMP to introduce readers to statistical thinking and data analysis It helps you choose the best technique for the problem at hand by using real world cases It also illustrates best practice workflow throughout the entire investigative cycle from asking valuable questions through data acquisition preparation analysis interpretation and communication of findings The book can stand on its own as a learning resource for professionals or it can be used to supplement a college level textbook for an introductory statistics course It includes varied examples and problems using real sets of data Each chapter typically starts with an important or interesting research question that an investigator has pursued Reflecting the broad applicability of statistical reasoning the problems come from a wide variety of disciplines including engineering life sciences business and economics as well as international and historical examples Application Scenarios at the end of each chapter challenge you to use your knowledge and skills with data sets that go beyond mere repetition of chapter examples New in the third edition chapters have been updated to demonstrate the enhanced capabilities of JMP including projects Graph Builder Query Builder and Formula Depot
