edition of EvoIASP the workshop which has been the only event speci cally dedicated to this topic since 1999 The second more important one is to give an overview of the opportunities o ered by Evolutionary C putation EC techniques to computer vision pattern recognition and image and signal processing It is not possible to celebrate EvoIASP properly without rst ackno edging EvoNET the EU funded network of excellence which has made it possible for Europe to build a strong European research community on EC Thanks to the success of the rst pioneering event organized by EvoNET held in 1998 in Paris it was possible to realize that not only was EC a f tile ground for basic research but also there were several application elds to which EC techniques could o er a valuable contribution That was how the ideaofcreatingasingleevent EvoWorkshops outofacollectionofworkshops dedicated to applications of EC was born Amongst the possible application elds for EC IASP was selected almost accidentally due to the occasional presence within EvoNET of less than a handful of researchers who were interested in it I would lie if I stated that the event was a great success since its very start but it was successful enough to survive healthily for a couple of years before reaching its present size relevance and popularity *Digital Image Processing* Uvais Qidwai,C.H. Chen,2009-10-15 Avoiding heavy mathematics and lengthy programming details Digital Image Processing An Algorithmic Approach with MATLAB presents an easy methodology for learning the fundamentals of image processing The book applies the algorithms using MATLAB without bogging down students with syntactical and debugging issues One chapter can typically be completed per week with each chapter divided into three sections The first section presents theoretical topics in a very simple and basic style with generic language and mathematics The second section explains the theoretical concepts using flowcharts to streamline the concepts and to form a foundation for students to code in any programming language The final section supplies MATLAB codes for reproducing the figures presented in the chapter Programming based exercises at the end of each chapter facilitate the learning of underlying concepts through practice This textbook equips undergraduate students in computer engineering and science with an essential understanding of digital image processing It will also help them comprehend more advanced topics and sophisticated mathematical material in later courses A color insert is included in the text while various instructor resources are available on the author s website **DIGITAL IMAGE PROCESSING USING MATLAB 2E** GONZALEZ,2009 Overview Digital Image Processing Using MATLAB is the first book to offer a balanced treatment of image processing fundamentals and the software principles used in their implementation The book integrates all fundamental concepts of DIP and the Image Processing Toolbox from The MathWorks Inc a leader in scientific computing The Image Processing Toolbox provides a stable well supported software environment for addressing a broad range of applications in digital image processing A unique feature of the book is its emphasis on showing how to enhance those tools by developing new code Features Over 100 new MATLAB image processing functions are developed a 40 % increase over existing functions in the Image Processing Toolbox Algorithms and MATLAB functions in the mainstream of digital image processing are discussed and implemented Includes new topical coverage on
