Controlled Nanoscale Motion Heiner Linke, Alf Mansson, 2007-02-09 When the size of a machine approaches the nanometer scale thermal fluctuations become large compared to the energies that drive the motor The control of motion at the nanoscale therefore requires physical understanding and technical approaches that are fundamentally different from those that are successful at the macroscale This volume provides an introduction to the state of the art of controlled nanoscale motion in biological and artificial systems Topics include the control and function of protein motors the physics of non equilibrium Brownian motion and the physics and fabrication of synthetic molecular motors The chapters in this book are based on selected contributions on the 2005 Nobel Symposium to Controlled Nanoscale Motion and are written by leading experts in their fields

Self-Assembled Water Chains Byung Il Kim, 2022-12-14 Despite advances in the long range electrostatic double layer force which depends strongly on ionic strength in water by using theoretical models such as DLVO Derjaguin Landau Verwey and Overbeek the structure of confined water in air still remains widely unknown and has led to a variety of unexplained phenomena This book bridges that gap by introducing a newly developed scanning probe microscopy SPM approach which enables one to probe confined water at the molecular and atomic scale Written by the developer of SPM this book covers this new approach as well as original approaches to addressing general interfacial water issues It also introduces the cantilever based optical interfacial force microscope COIFM which was invented by the author along with the methodology The improved understanding will contribute to liquid based nano and bio technologies such as lab on a chip technologies nanofluidic devices dip pen nanolithography nano oxidation water based granular interactions liquid based nanolubricants hydration layers in biopolymers manipulation of biomolecules protein folding stability of colloid suspensions enzyme activity swelling in clays development of bioactive surfaces water columns and ion channeling in membranes and scanning probe microscopy SPM It will also contribute to the improved performance of moving components in silicon based
