**Advanced Microsystems for Automotive Applications 2006** Jürgen Valldorf,Wolfgang Gessner,2006-07-31 Looking back 10 years when the International Forum on Advanced Microsystems for Automotive Application AMAA started enormous progress has been made in reducing casualties emissions and in increasing comfort and performance Microsystems in many cases provided the key functions for this progress Although the issues the event concentrated on didn't change significantly safety powertrain comfort etc considerable shifts of technological paradigms and approaches can be stated The future of microsystems will consist of integrated smart systems which are able to diagnose a situation to describe and to qualify it They will be able to identify and mutually address each other They will be predictive and therefore they will be able to decide and help to decide Smart systems will enable the automobile to interact with the environment they will perform multiple tasks and assist a variety of activities Smart systems will be highly reliable often networked and energy autonomous There is a coincidence of the AMAA objectives and those of EPoSS the European Technology Platform on Smart Systems Integration contributing

intensively to the development of automotive specific smart systems You will find a series of the EPOSS items in the programme of the 10th AMAA which continues to be a unique exchange forum for companies in the automotive value chain The publication in hand also reflects these issues It is a cut out of new technological priorities in the area of microsystems based smart devices and opens up a mid term perspective of future smart systems applications in automobiles Additional information is available on [www.amaa.de](http://www.amaa.de)
