Commutative Algebra Mathematics Lecture Note Series:

Commutative Algebra Hideyuki Matsumura, 1970 **Commutative Algebra** James Thomson Knight, 1971 This introduction to commutative algebra gives an account of some general properties of rings and modules with their applications to number theory and geometry It assumes only that the reader has completed an undergraduate algebra course The fresh approach and simplicity of proof enable a large amount of material to be covered exercises and examples are included throughout the notes **Lectures on Tight Closure and Its Applications** Irena Swanson, Kei-ichi Watanabe, 2026-01-05 This volume consists of edited lecture notes from two events at the International Centre for Theoretical Physics ICTP in Trieste Italy organized in honor of Melvin Hochster and Craig Huneke The two events were the online International Graduate course on Tight Closure and Its Applications spread over summer 2022 and the May 2023 School on Commutative Algebra and Algebraic Geometry in Prime Characteristics The unifying basis of these events was the theory of tight closure the brainchild of Melvin Hochster and Craig Huneke in the late 1980s which has had a dramatic effect on the field of commutative algebra giving unified proofs and strong generalizations of many major theorems in commutative algebra and stimulating much research including recent proofs of longstanding conjectures The aim of the two events as well as of this volume is to provide training in the foundations of commutative algebra and algebraic geometry in prime characteristic and to present some of the exciting recent developments in and beyond tight closure The lecture notes for the online school also come with exercises and solutions The topics in the volume include characteristic p methods test ideals direct summands singularities Hilbert Kunz multiplicity Brian on Skoda theorems big Cohen Macaulay algebras the localization problem uniform Artin Rees results vector bundles and tight closure singularity invariants The intended audience is graduate students learning the material as well as researchers wanting the latest advances in one reference

Transcendence in Algebra, Combinatorics, Geometry and Number Theory Alin Bostan, Kilian Raschel, 2021-11-02 This proceedings volume gathers together original articles and survey works that originate from presentations given at the conference Transient Transcendence in Transylvania held in Bra ov Romania from May 13th to 17th 2019 The conference gathered international experts from various fields of mathematics and computer science with diverse interests and viewpoints on transcendence The covered topics are related to algebraic and transcendental aspects of special functions and special numbers arising in algebra combinatorics geometry and number theory Besides contributions on key topics from invited speakers this volume also brings selected papers from attendees **Using the Mathematics Literature** Kristine K. Fowler, 2004-05-25 This reference serves as a reader friendly guide to every basic tool and skill required in the mathematical library and helps mathematicians find resources in any format in the mathematics literature It lists a wide range of standard texts journals review articles newsgroups and Internet and database tools for every major subfield in mathemati

Introduction To Algebraic Geometry And Commutative Algebra Dilip P Patil, Uwe Storch, 2010-03-31 This

introductory textbook for a graduate course in pure mathematics provides a gateway into the two difficult fields of algebraic geometry and commutative algebra Algebraic geometry supported fundamentally by commutative algebra is a cornerstone of pure mathematics Along the lines developed by Grothendieck this book delves into the rich interplay between algebraic geometry and commutative algebra A selection is made from the wealth of material in the discipline along with concise yet clear definitions and synopses

The Resolution of Singular Algebraic Varieties David Ellwood,Herwig Hauser,Shigefumi Mori,Josef Schicho,2014-12-12 Resolution of Singularities has long been considered as being a difficult to access area of mathematics The more systematic and simpler proofs that have appeared in the last few years in zero characteristic now give us a much better understanding of singularities They reveal the aesthetics of both the logical structure of the proof and the various methods used in it The present volume is intended for readers who are not yet experts but always wondered about the intricacies of resolution As such it provides a gentle and quite comprehensive introduction to this amazing field The book may tempt the reader to enter more deeply into a topic where many mysteries especially the positive characteristic case await to be disclosed Titles in this series are co published with the Clay Mathematics Institute Cambridge MA *Books in Series* ,1985 Vols for 1980 issued in three parts Series Authors and Titles

Introduction to Lipschitz Geometry of Singularities Walter Neumann,Anne Pichon,2021-01-11 This book presents a broad overview of the important recent progress which led to the emergence of new ideas in Lipschitz geometry and singularities and started to build bridges to several major areas of singularity theory Providing all the necessary background in a series of introductory lectures it also contains Pham and Teissier s previously unpublished pioneering work on the Lipschitz classification of germs of plane complex algebraic curves While a real or complex algebraic variety is topologically locally conical it is in general not metrically conical there are parts of its link with non trivial topology which shrink faster than linearly when approaching the special point The essence of the Lipschitz geometry of singularities is captured by the problem of building classifications of the germs up to local bi Lipschitz homeomorphism The Lipschitz geometry of a singular space germ is then its equivalence class in this category The book is aimed at graduate students and researchers from other fields of geometry who are interested in studying the multiple open questions offered by this new subject
