Idiom Treatment Experiments in Machine Translation Dimitra Anastasiou,2010-09-13 In 1975 Searle stated that one should speak idiomatically unless there is some good reason not to do so Fillmore Kay and O Connor in 1988 defined an idiomatic expression or construction as something that a language user could fail to know while knowing everything else in the language Our language is rich in conversational phrases idioms metaphors and general expressions used in metaphorical meaning These idiomatic expressions pose a particular challenge for Machine Translation MT because their translation for the most part does not work literally but logically The present book shows how idiomatic expressions can be recognized and correctly translated with the help of a bilingual idiom dictionary English German a monolingual German corpus and morphosyntactic rules The work focuses on the field of Example based Machine Translation EBMT A theory of idiomatic expressions with their syntactic and semantic properties is provided followed by the practical part of the book which describes how the hybrid EBMT system METIS II is able to correctly process idiomatic expressions A comparison of METIS II with three commercial systems shows that idioms are not impossible to translate as it was predicted in 1952 The only way for a machine to treat idioms is not to have idioms This book furnishes plenty of examples of idiomatic phrases and provides the foundation for how MT systems can process and translate idioms by means of simple linguistic resources *Report of the Workshop on Rehabilitation Engineering Education, Held November 3-5, 1976 at the University of Tennessee, Knoxville*

Resources Management in Water-scarce Regions Stefan Liehr, Johanna Kramm, Alexander Jokisch, Katharina Müller, 2018-03-15. The research project CuveWaters developed and implemented adapted technologies and accompanying measures to support the national process towards an Integrated Water Resources Management (IWRM). The aim is to give people in the Cuvelai-Etosa Basin reliable access to clean water over the long term, thus enhancing their livelihood and health, and to create job opportunities. IWRM relies on solutions that use various sources, types, and qualities of water for different purposes. CuveWaters implemented pilot plants for rain and floodwater harvesting, groundwater desalination, as well as facilities for sanitation and water reuse. Technical components of the project were framed by societal and scientific components. *Integrated Water Resources Management in Water-scarce Regions* provides a comprehensive view on the complexity and interconnectedness of findings and conclusions regarding the principle strategic approach within the CuveWaters project's concept. The book aims to present the work of technical, social, and natural scientists, but also of media professionals. It gives thematically focussed details on the three technology-based solutions, which go beyond mere technical considerations and embed this into the overarching process towards IWRM in Namibia. Finally, it critically addresses lessons learnt and limits of projects in the context of research for implementation. This book is of great value to experts, professionals, and also students and academics in the areas of water management, technology development and implementation, and transdisciplinary science. **Information Technology for Manufacturing Systems III** Wei Deng, Qi Luo, 2012-09-26.
