**The Theory and Practice of Experimental Philosophy** Justin Sytsma,Jonathan Livengood,2015-11-27 In recent years developments in experimental philosophy have led many thinkers to reconsider their central assumptions and methods It is not enough to speculate and introspect from the armchair philosophers must subject their claims to scientific scrutiny looking at evidence and in some cases conducting new empirical research The Theory and Practice of Experimental Philosophy is an introduction and guide to the systematic collection and analysis of empirical data in academic philosophy This book serves two purposes first it examines the theory behind  $\chi^2$  including its underlying motivations and the objections that have been leveled against it Second the book offers a practical guide for those interested in doing experimental philosophy detailing how to design implement and analyze empirical studies Thus the book explains the reasoning behind  $\chi^2$  and provides tools to help readers become experimental philosophers

**Corpus Methods for Semantics** Dylan Glynn,Justyna A. Robinson,2014-11-06 This volume seeks to advance and popularise the use of corpus driven quantitative methods in the study of semantics The first part presents state of the art research in polysemy and synonymy from a Cognitive Linguistic perspective The second part presents and explains in a didactic manner each of the statistical techniques used in the first part of the volume A handbook both for linguists working with statistics in corpus research and for linguists in the fields of polysemy and synonymy

**High-Resolution Profiling of Protein-RNA Interactions** Mathias Munschauer,2015-03-14 The work reported in this book represents an excellent example of how creative experimentation and technology development complemented by computational data analysis can yield important insights that further our understanding of biological entities from a systems perspective The book describes how the study of a single RNA binding protein and its interaction sites led to the development of the novel protein occupancy profiling technology that for the first time captured the mRNA sequence space contacted by the ensemble of expressed RNA binders Application of protein occupancy profiling to eukaryotic cells revealed that extensive sequence stretches in 3 UTRs can be contacted by RBPs and that evolutionary conservation as well as negative selection act on protein RNA contact sites suggesting functional importance Comparative analysis of the RBP bound sequence space has the potential to unravel putative cis acting RNA elements without a priori knowledge of the bound regulators Here Dr Munschauer provides a comprehensive introduction to the field of post transcriptional gene regulation examines state of the art technologies and combines the conclusions from several journal articles into a coherent and logical story from the frontiers of systems biology inspired life science This thesis submitted to the Department of Biology Chemistry and Pharmacy at Freie Universit t Berlin was selected as outstanding work by the Berlin Institute for Medical Systems Biology at the Max Delbrueck Center for Molecular Medicine Germany

**Modelling Spatial and Spatial-Temporal Data** Robert P. Haining,Guangquan Li,2020-01-27 Modelling Spatial and Spatial Temporal Data A Bayesian Approach is aimed at statisticians and quantitative

social economic and public health students and researchers who work with spatial and spatial temporal data It assumes a grounding in statistical theory up to the standard linear regression model The book compares both hierarchical and spatial econometric modelling providing both a reference and a teaching text with exercises in each chapter The book provides a fully Bayesian self contained treatment of the underlying statistical theory with chapters dedicated to substantive applications The book includes WinBUGS code and R code and all datasets are available online Part I covers fundamental issues arising when modelling spatial and spatial temporal data Part II focuses on modelling cross sectional spatial data and begins by describing exploratory methods that help guide the modelling process There are then two theoretical chapters on Bayesian models and a chapter of applications Two chapters follow on spatial econometric modelling one describing different models the other substantive applications Part III discusses modelling spatial temporal data first introducing models for time series data Exploratory methods for detecting different types of space time interaction are presented followed by two chapters on the theory of space time separable without space time interaction and inseparable with space time interaction models An applications chapter includes the evaluation of a policy intervention analysing the temporal dynamics of crime hotspots chronic disease surveillance and testing for evidence of spatial spillovers in the spread of an infectious disease A final chapter suggests some future directions and challenges

**Data Science and Big Data Analytics** EMC Education Services,2015-01-05 Data Science and Big Data Analytics is about harnessing the power of data for new insights The book covers the breadth of activities and methods and tools that Data Scientists use The content focuses on concepts principles and practical applications that are applicable to any industry and technology environment and the learning is supported and explained with examples that you can replicate using open source software This book will help you Become a contributor on a data science team Deploy a structured lifecycle approach to data analytics problems Apply appropriate analytic techniques and tools to analyzing big data Learn how to tell a compelling story with data to drive business action Prepare for EMC Proven Professional Data Science Certification Get started discovering analyzing visualizing and presenting data in a meaningful way today

Berger,2015-03-03 Improving the User Experience through Practical Data Analytics shows you how to make UX design decisions based on data not hunches Authors Fritz and Berger help the UX professional recognize the enormous potential of user data that is collected as a natural by product of routine UX research methods including moderated usability tests unmoderated usability tests surveys and contextual inquiries Then step by step they explain how to utilize both descriptive and predictive statistical techniques to gain meaningful insight with that data By mastering the use of these techniques you ll delight your users increase your bottom line and gain a powerful competitive advantage for your company and yourself Key features include Practical advise on choosing the right data analysis technique for each project A step by step methodology for applying each technique including examples and scenarios drawn from the UX field Detailed screen shots and instructions for performing the techniques using Excel both for PC and Mac and SPSS Clear and concise guidance on interpreting the data output Exercises to practice the techniques Practical guidance on choosing the right data analysis technique for each project Real world examples to build a theoretical and practical understanding of key concepts from consumer and financial verticals A step by step methodology for applying each predictive technique including detailed examples A detailed guide to interpreting the data output and examples of how to effectively present the findings in a report Exercises to learn the techniques

*Microbial Ecology in the North Pacific Subtropical Gyre* Samuel T. Wilson,Matthew J. Church,2018-11-16 The microbial community in the oligotrophic North Pacific Subtropical Gyre is dominated by unicellular microorganisms less than a few micrometers in size Despite the persistent low nutrient concentrations phytoplankton growth rates appear near maximal sustained by the recycling of nutrients with plankton population sizes regulated by processes such as zooplankton grazing and viral lysis Seasonal pulses of particle export to the deep sea and increases in phytoplankton abundance occur during the summer months however the factors that result in these imbalances in growth and loss processes are not well understood Nonetheless as a result of persistent fieldwork and development of sensitive methodologies the biogeochemical and ecological dynamics occurring over timescales ranging from diel to interannual are being revealed This Research Topic covers multiple aspects of microbial oceanography in the oligotrophic North Pacific Subtropical Gyre including identification

and isolation of microorganisms quantification of microbial biomass and turnover metabolism and physiological activities and microbial mediated biogeochemical cycling All of the papers use field data collected by either the Hawaii Ocean Time series HOT program the Center for Microbial Oceanography Research and Education C MORE or the Simons Collaboration on Ocean Processes and Ecology SCOPE These three programs have greatly increased our understanding of microbial ecology and biogeochemical cycling in the NPSG in part by providing unparalleled access to the NPSG on oceanographic research vessels
