

Solution:

Steps:

1. Find the probability of each independent event.
2. Multiply the probabilities of each event.

- P (green and red)

$$P(\text{green}) = \frac{1}{12} \quad \begin{array}{l} 1 \text{ green marble} \\ 12 \text{ total marbles in the sample space} \end{array}$$

$$P(\text{red}) = \frac{5}{12} \quad \begin{array}{l} 5 \text{ red marbles} \\ 12 \text{ marbles in the sample space} \end{array}$$

$$P(\text{green and red}) = \frac{1}{12} \cdot \frac{5}{12} = \frac{5}{144}$$

The probability of choosing a green marble and then a red marble is $5/144$ which is 3.5% chance.

Probability And Statistics Problems Solutions:

Statistics: Problems And Solution (Second Edition) Eryl E Bassett, J Mike Bremner, Byron Jones, Byron J T Morgan, P M North, Ian T Jolliffe, 2000-06-27 Originally published in 1986 this book consists of 100 problems in probability and statistics together with solutions and most importantly extensive notes on the solutions The level of sophistication of the problems is similar to that encountered in many introductory courses in probability and statistics At this level straightforward solutions to the problems are of limited value unless they contain informed discussion of the choice of technique used and possible alternatives The solutions in the book are therefore elaborated with extensive notes which add value to the solutions themselves The notes enable the reader to discover relationships between various statistical techniques and provide the confidence needed to tackle new problems

Fifty challenging problems in probability with solutions Frederick Mosteller, *Probability Problems and Solutions* Stefan Hollos, J. Richard Hollos, 2013-04 This book will help you learn probability in the most effective way possible through problem solving It contains over 200 problems in discrete probability with detailed solutions for each Most of the problems require very little mathematical background to solve A good grasp of algebra is all that is required Some prior exposure to probability or combinatorics will make things easier but the book has enough introductory material to cover any deficiency in those areas There are sections that review the basics of discrete probability and combinatorics There are also sections on advance topics in discrete probability that are helpful in solving the more difficult and interesting problems The problems range widely in difficulty and variety They begin very easy and increase in difficulty as you go The first few are warm up problems to wake up your probability neurons and get you ready for what s to come Some of the later problems can be quite challenging and may take some effort to solve There are problems on letters and words dice and coin problems card problems sports problems Bayesian problems collection problems birthday problems and many many more The almost endless variety of probability problems is one of the things that makes them so stimulating and fun to solve

The Theory of Problem-Solution Dualities and Polarities Kofi Kissi Dompere, 2022-04-25 This book is concerned with the development of the understanding of the relational structures of information knowledge decision choice processes of problems and solutions in the theory and practice regarding diversity and unity principles of knowing science non science and information knowledge systems through dualistic polar conditions of variety existence and nonexistence It is a continuation of the sequence of my epistemic works on the theories on fuzzy

rationality info statics info dynamics entropy and their relational connectivity to information language knowing knowledge cognitive practices relative to variety identification problem solution dualities variety transformation problem solution dualities and variety certainty uncertainty principle in all areas of knowing and human actions regarding general social transformations It is also an economic theoretic approach in understanding the diversity and unity of knowing and science through neuro decision choice actions over the space of problem solution dualities and polarities The problem solution dualities are argued to connect all areas of knowing including science and non science social science and non social science into unity with diversities under neuro decision choice actions to support human existence and nonexistence over the space of static dynamic dualities The concepts of diversity and unity are defined and explicated to connect to the tactics and strategies of decision choice actions over the space of problem solution dualities The concepts of problem and solution are defined and explicated not in the space of absoluteness but rather in the space of relativity based on real cost benefit conditions which are shown to be connected to the general parent offspring infinite process where every solution generates new problem s which then generates a search for new solutions within the space of minimum maximum dualities in the decision choice space under the principle of non satiation over the space of preference non preference dualities with analytical tools drawn from the fuzzy paradigm of thought which connects the conditions of the principle of opposites to the conditions of neuro decision choice actions in the zone of variety identifications and transformations The Monograph would be useful to all areas of Research Learning and Teaching at Advanced Stages of Knowing and Knowledge Production
