The Traveling Salesman Problem David L. Applegate,2006 Presents the findings on one of the most intensely investigated subjects in computational mathematics the travelling salesman problem This book describes the method and computer code used to solve a range of large scale problems and demonstrates the interplay of applied mathematics with increasingly powerful computing platforms *A Linear Programming Approach for the Traveling Salesman Problem* Saman Hong,1972

Approximation Algorithms for Traveling Salesman Problems Based on Linear Programming Relaxations Hyung Chan An, 2012 The traveling salesman problem TSP is the problem of finding a shortest Hamiltonian circuit or path in a given weighted graph This problem has been studied in numerous variants and linear programming has played an important role in the design of approximation algorithms for these problems In this thesis we study two versions of the traveling salesman problem and present approximation algorithms for them based on the Held Karp relaxation We first investigate the s t path TSP Hoogeveen showed that the natural variant of Christofides algorithm is a  $5/3$  approximation algorithm for this problem this asymptotically tight bound had remained the best approximation ratio known until now We surpass this 20 year old barrier

by presenting a deterministic  $1.5$  approximation algorithm for the  $s-t$  path TSP for an arbitrary metric. The techniques devised in this context can also be applied to other optimization problems including the prize collecting  $s-t$  path problem and the unit weight graphical metric  $s-t$  path TSP. The integrality gaps of the LP relaxations for all three problems are studied. Then we consider the bottleneck asymmetric TSP where the objective is minimizing the bottleneck or maximum length edge cost rather than the total edge cost. We present the first nontrivial approximation algorithm for this problem by giving a novel algorithmic technique to shortcut Eulerian circuits while bounding the lengths of the shortcuts needed. Building on this framework and the result of Asadpour, Goemans, Madry, Oveis Gharan and Saberi we achieve an  $O(\log n \log \log n)$  approximation algorithm. We also explore the possibility of improvement upon this result through a comparison to the symmetric counterpart of the problem.
