Equipment Inventories for Owners and Facility Managers R. A. Keady,2013-03-25 How to use industry standards to create complete consistent and accurate equipment inventories The National Institute of Science and Technology estimates that the loss of information between the construction of buildings and

their operation and maintenance costs facility owners 15.8 billion every year. This phenomenal loss is caused by inconsistent standards for capturing information about facilities and their equipment. In *Equipment Inventories for Owners and Facility Managers*, Robert Keady draws on his twenty years of experience in facility management and his intimate knowledge of CSI classification systems and standards to tackle this problem head on. Using standards already in use in the AEC industry, he provides the road map for capturing everything owners and facility managers need to know to operate and maintain any facility. This comprehensive step by step guide explains the different types of equipment inventories and why they are important. It identifies and describes the types of information that should be captured in an equipment inventory. It describes and compares the different industry standards: CSI OmniClass and UniFormat COBie and SPie that can be used for equipment inventories. It provides best practices for identifying and tagging equipment. It walks through the equipment inventory process with real world examples and best practices. It provides the tools for conducting the equipment inventory tables of all the possible information and data that need to be collected and fifty maps of workflows that can be used to capture that data immediately.

The Facility Management Handbook David G. COTTS PE, CFM, Kathy O. ROPER CFM, LEED AP, Richard P. PAYANT CFM, CPE, 2009-07-22. Based on best practices and proven research, *The Facility Management Handbook* has long been the go to resource for professionals in the field. Extensively updated for the realities of today's workplace, the third edition provides readers with the tools and guidance they need to wipe out inefficiency and create a productive facility that integrates people, place, and process. Covering a broad range of topics from space planning and maintenance to benchmarking and outsourcing, readers will gain practical insight into how they can design, construct, and maintain facilities using sustainable practices, provide a safe, attractive work environment that supports productivity, ensure that facility plans match organizational needs, plan and control capital expenditures, address critical security and emergency preparedness issues. Complete with case studies and indispensable information on sustainability and post 9/11 security concerns, this is still the ultimate resource for facility managers.

BIM-based Life Cycle Information Management Rui Liu, 2012. The AEC industry has raised a good deal of interest surrounding the use of BIM for facility management. The opportunities for leveraging BIM for facility operations are compelling, but the utilization of BIM in facility management is lagging behind. BIM implementation in the design and construction phases. On one hand, designers and constructors seldom know what documents and other varieties of information are needed for the facility management phase. On the other hand, a limited degree of experience in the operation and maintenance knowledge of these existing buildings is fed back to the design phase. This research is aimed to bridge the communication gap between design and facility management professionals. Through available BIM extension, development tools, information exchange, and knowledge sharing can be attained for both these essential partners in the construction industry. The expected result would be a platform that can transfer information bi-directionally between design and facility management professionals. Through literature review, interviews, and surveys with

industry professionals the requirements for facility operation and maintenance were determined A facility management template has been developed¹³ that carries the information needed by facility managers as well as a predefined list for maintenance management in design tools such as Revit Moreover for maintainability checking rule sets for model checker applications to gauge the accessibility of maintenance activity were created by using the Revit API and Solibri Model Checker A relief fan case of accessibility problems was studied to illustrate and validate the Revit Add In tool Accessibility Checker
