

Given the system

$$dx/dt = Ax, \quad (2)$$

where A is a 2×2 matrix and x is 2×1 vector, an **equilibrium solution** (or **critical point**) for the system (2) is a point where

$$Ax = 0$$

If A is nonsingular (it has an inverse), then the only critical point for system (2) is

$$x = 0$$

Boyce's Elementary Differential Equations and Boundary Value Problems, Global Edition William E. Boyce, Richard C. DiPrima, Douglas B. Meade, 2017-04-17 *Boyce's Elementary Differential Equations and Boundary Value Problems* like its predecessors is written from the viewpoint of the applied mathematician whose interest in differential equations may sometimes be quite theoretical sometimes intensely practical and often somewhere in between The authors have sought to combine a sound and accurate but not abstract exposition of the elementary theory of differential equations with considerable material on methods of solution analysis and approximation that have proved useful in a wide variety of applications While the general structure of the book remains unchanged some notable changes have been made to improve the clarity and readability of basic material about differential equations and their applications In addition to expanded explanations this edition includes new problems updated figures and examples to help motivate students The program is primarily intended for undergraduate students of mathematics science or engineering who typically take a course on differential equations during their first or second year of study The main prerequisite for engaging with the program is a working knowledge of calculus gained from a normal two or three semester course sequence or its equivalent Some familiarity with matrices will also be helpful in the chapters on systems of differential equations

Cullen,1997 This Fourth Edition of the expanded version of Zill s best selling A FIRST COURSE IN DIFFERENTIAL EQUATIONS WITH MODELING APPLICATIONS places an even greater emphasis on modeling and the use of technology in problem solving and now features more everyday applications Both Zill texts are identical through the first nine chapters but this version includes six additional chapters that provide in depth coverage of boundary value problem solving and partial differential equations subjects just introduced in the shorter text Previous editions of these two texts have enjoyed such great success in part because the authors pique students interest with special features and in text aids Pre publication reviewers also praise the authors accessible writing style and the text s organization which makes it easy to teach from and easy for students to understand and use Understandable step by step solutions are provided for every example And this edition makes an even greater effort to show students how the mathematical concepts have relevant everyday applications Among the boundary value related topics covered in this expanded text are plane autonomous systems and stability orthogonal functions Fourier series the Laplace transform and elliptic parabolic and hyperparabolic partial differential equations and their applications

Differential Equations Bruce P. Conrad,2003 Written for beginners this well organized introduction promotes a solid understanding of differential equations that is flexible enough to meet the needs of many different disciplines With less emphasis on formal calculation than found in other books all the basic methods are covered first order equations separation exact form and linear equations as well as higher order cases linear equation with constant and variable coefficients Laplace transform methods and boundary value problems The book ssystems focus induces an intuitive understanding of the concept of a solution of an initial value problem in order to resolve potential confusion about what is being approximated when a numerical method is used The author outlines first order equations including linear and nonlinear equations and systems of differential equations as well as linear differential equations including the Laplace transform and variable coefficients nonlinear differential equations and boundary problems and PDEs For those looking for a solid introduction to differential equations
