Business Process Engineering:

Business Process Engineering D. Jack Elzinga, Thomas R. Gullede, Chung-Yee Lee, 1999-01-31 Due to growing concern about the competitiveness of industry in the international marketplace and the efficiency of government enterprises widespread initiatives are currently underway to enhance the competitive posture of firms and to streamline government operations Nearly all enterprises are engaged in assessing ways in which their productivity product quality and operations can be improved These efforts can be described as Business Process Engineering BPE BPE had its roots in industry under differing titles Process Improvement Process Simplification Process Innovation Reengineering etc It has matured to be an important ingredient of successful enterprises in the private and public sectors After extensive exploitation by industrial and governmental practitioners and consultants it is attracting increasing attention from academics in the fields of engineering and business However even with all of this attention in the popular literature serious scholarly literature on BPE is in short supply This is somewhat surprising especially since so many large international organizations have attempted BPE projects with varied success

Business Process Engineering August-Wilhelm Scheer, 2012-12-06 The first English language edition of this book was published in 1989 under the title Enterprise Wide Data Modelling It introduced a new enterprise data model that has since gone on to enjoy widespread use as a reference model Since that time the author has continued to develop the representation of application problems both on a theoretical basis using modeling languages and on a practical basis using real world studies This has led to so many new aspects that this second English language edition the original German version is now in its fifth edition constitutes a completely new book The new title expresses the stricter emphasis on business processes in contrast to the previous edition which was geared more toward a functional structure This approach reflects the trend toward process oriented structural and procedural organization in enterprises that is currently being supported by new means of information processing Perhaps the most obvious way in which the second English language edition differs from the first is in the increased number of pages This is a direct result of the higher degree of detail and the more thorough problem description presented in the new edition The degree of detail has increased in the case of those problems that are particularly important in terms of selecting and designing information systems in an industrial enterprise e.g. the product description and CAM factory organization This approach provides greater reality and thus facilitates a better understanding of the complex organism that is an industrial enterprise

Business Process Engineering August-Wilhelm Scheer, 1994 *Business Process Engineering Study Edition* August-Wilhelm Scheer, 2013-11-11 The 1st study edition is based on the 2nd hardcover edition of Business Process Engineering Several inconsistencies and minor modifications have been carried out This study edition is a response to many requests for a budget priced edition for students This edition pursues a holistic descriptive approach that is based on the Architecture of Integrated Information Systems ARIS developed by the author In addition to the data view this approach also comprises the function

organization and control views and encompasses all phases of the information system lifecycle from analysis requirements definition and design specification to implementation The reference models developed here can thus serve as initial models for concrete applications The illustrations are oriented strongly toward standard software in order to reflect their significance in terms of real world representations In particular the discussion applies examples from the R 3 system from SAP AG and from the systems from IDS Prof Scheer GmbH build on concepts developed by the author No user description of concrete systems is provided instead general foundations are laid in order to facilitate a deeper understanding of the application logic that is reflected in standard software An attempt is made to close the gap between business administration theory and the operating instructions of standard software
