Chapter 8: Random Variables and Probability Models – Quiz A Name _____

1. A fast food restaurant just leased a new freezer and food fryer for three years. The service contract for the freezer offers unlimited repairs for a fee of \$125 a year plus a \$35 service charge for each repair needed. The restaurant's research indicates that during a given year 80% of these freezers need no repairs, 11% needed to be serviced once, 5% twice, 4% three times, and none required more than three repairs.

- Find the expected number of repairs for this freezer per year.
- Find the standard deviation of the number of repairs per year.
- What are the mean and standard deviation of the restaurant's annual expense with the service contract for the freezer?

2. Internet service providers (ISP) need to resolve customer problems as quickly as possible. For one ISP, past data indicate that the likelihood is .80 that customer calls regarding Internet service interruptions are resolved within one hour. Out of the next 10 customer calls about interrupted service,

- What is the probability that exactly 7 will be resolved within one hour?
- What is the probability that at least 7 will be resolved within one hour?
- How many customers would be expected to have their service problems resolved within one hour?

3. Suppose that incoming calls per hour to a customer service center of a small credit union are uniformly distributed between 0 and 6 calls.
