Cybersecurity U.s. Government Accountability Office,2017-08-03 Cyber attacks could have a potentially devastating impact on the nation's computer systems and networks disrupting the operations of government and businesses and the lives of private individuals Increasingly sophisticated cyber threats have underscored the need to manage and bolster the cybersecurity of key government systems as well as the nation's critical infrastructure GAO has designated federal information security as a government wide high risk area since 1997 and in 2003 expanded it to include cyber critical infrastructure GAO has issued numerous reports since that time making recommendations to address weaknesses in federal information security programs as well as efforts to improve critical infrastructure protection Over that same period the executive branch has issued strategy documents that have outlined a variety of approaches for dealing with

persistent cybersecurity issues GAO's objectives were to 1 identify challenges faced by the federal government in addressing a strategic approach to cybersecurity and 2 determine the extent to which the national cybersecurity strategy adheres to desirable characteristics for such a strategy To address these objectives GAO analyzed previous reports and updated information obtained from officials at federal agencies with key cybersecurity responsibilities GAO also obtained the views of experts in information technology management and cybersecurity and conducted Cybersecurity, Actions Needed to Strengthen U.S. Capabilities United States. Government Accountability Office, 2017-07-11 Cyber based intrusions and attacks on federal systems and systems supporting our nation's critical infrastructure such as communications and financial services are evolving and becoming more sophisticated GAO first designated information security as a government wide high risk area in 1997 This was expanded to include the protection of cyber critical infrastructure in 2003 and protecting the privacy of personally identifiable information in 2015 This statement 1 provides an overview of GAO's work related to cybersecurity of the federal government and the nation's critical infrastructure and 2 identifies areas of consistency between GAO recommendations and those recently made by the Cybersecurity Commission and CSIS In preparing this statement GAO relied on previously published work and its review of the two recent reports issued by the Commission and CSIS Creating a National Framework for Cybersecurity: An Analysis of Issues and Options, 2005 Even before the terrorist attacks of September 2001 concerns had been rising among security experts about the vulnerabilities to attack of computer systems and associated infrastructure Yet despite increasing attention from federal and state governments and international organizations the defense against attacks on these systems has appeared to be generally fragmented and varying widely in effectiveness Concerns have grown that what is needed is a national cybersecurity framework a coordinated coherent set of public and private sector efforts required to ensure an acceptable level of cybersecurity for the nation As commonly used cybersecurity refers to three things measures to protect information technology the information it contains processes and transmits and associated physical and virtual elements the degree of protection resulting from application of those measures and the associated field of professional endeavor Virtually any element of cyberspace can be at risk and the degree of interconnection of those elements can make it difficult to determine the extent of the cybersecurity framework that is needed Identifying the major weaknesses in U.S. cybersecurity is an area of some controversy However some components appear to be sources of potentially significant risk because either major vulnerabilities have been identified or substantial impacts could result from a successful attack There are several options for broadly addressing weaknesses in cybersecurity They include adopting standards and certification promulgating best practices and guidelines using benchmarks and checklists use of auditing improving training and education building security into enterprise architecture using risk management and using metrics **Assessing Persistent and Emerging Cyber Threats to the U.S. in the Homeland** United States. Congress. House. Committee on Homeland Security. Subcommittee on Counterterrorism and Intelligence, United States. Congress.

House. Committee on Homeland Security. Subcommittee on Cybersecurity, Infrastructure Protection, and Security Technologies, 2015-02-16 The expanding number of cyber actors ranging from nation states to terrorists to criminals as well as increasing attack capability and the increasing intensity of cyber attacks around the globe have made cyber warfare and cyber crime one of the most significant threats facing the United States This week the Department of Justice unsealed an indictment against five Chinese individuals working for the Chinese military for hacking into multiple private sector U S businesses to steal their sensitive proprietary information Additionally the FBI and international law enforcement arrested over 100 people for using malicious software called Blackshades which is used remotely to take over a computer turn on the web cam and access passwords and other information without the owner s knowledge Over the last decade the threats facing the United States have become more diverse as have the tools for conducting attacks and waging war While the United States has made great strides to secure the homeland since 9 11 our enemies have evolved and we must now consider that a foreign adversary terrorist network or a criminal organization will use cyberspace to penetrate America s defenses
