Handbook of Mineral Elements in Food de la Guardia,Salvador Garrigues,2015-04-20 Mineral elements are found in foods and drink of all differenttypes from drinking water through to mothers milk Thesearch for mineral elements has shown that many trace andultratrace level elements presented in food are required for ahealthy life By identifying and analysing these elements it ispossible to evaluate them for their specific health givingproperties and conversely to isolate their less desirableproperties with a view to reducing or removing them altogether fromsome foods The analysis of mineral elements requires a number ofdifferent techniques some methods may be suitable for onefood type yet completely unsuited to another The Handbook of Mineral Elements in Food is the firstbook to bring together the analytical techniques the regulatoryand legislative framework and the widest possible range of foodtypes into one comprehensive handbook for food scientists andtechnologists Much of the book is based on the authors owndata most of which is previously unpublished making theHandbook of Mineral Elements in Food a vital andup to the minute reference for food scientists in industry andacademia alike Analytical chemists nutritionists and food policymakers will also find it an invaluable resource Showcasing contributions from international researchers andconstituting a major resource for our future understanding of the topic the Handbook of Mineral Elements in Food is anessential reference and should be found wherever food science andtechnology are researched and taught
