Construction Safety Planning David V. MacCollum,1995 Construction Safety Planning David V MacCollum Construction Safety Planning is a comprehensive practical step by step guide for those who design and oversee large and small projects Designed to facilitate compliance with new OSHA objectives it presents for those who are responsible for construction safety what questions to ask in order to avoid conditions that invite injury or death on site The book shows how to integrate safety planning into existing design and construction scheduling in order to avoid duplicating paperwork that is normally associated with safety planning Advice is given on how to involve all supervisory personnel as hazard hunters so that timely prevention measures can be taken Author David V MacCollum is a forty five year veteran safety engineer who participated in the

development of safety planning concepts used by the U S Army Corps of Engineers on big dam projects in the Pacific Northwest during the 1950s In this clearly written reference he highlights the concepts and practices that reduced construction deaths by 75 percent and are today still enabling the Corps of Engineers to enjoy the same reduction nationwide when compared to similar work not under its supervision the end result being savings of several billion dollars each year The risk of death on the job for construction workers is five times greater than that of the average American worker A new OSHA era will change that With this book everyone working in the field of construction from design to maintenance will have the tools and knowledge to make a difference
