Vehicular Engine Design Kevin Hoag, Brian Dondlinger, 2015-08-04 This book provides an introduction to the design and mechanical development of reciprocating piston engines for vehicular applications Beginning from the determination of required displacement and performance coverage moves into engine configuration and architecture Critical layout dimensions and design trade offs are then presented for pistons crankshafts engine blocks camshafts valves and manifolds Coverage continues with material strength and casting process selection for the cylinder block and cylinder heads Each major engine component and sub system is then taken up in turn from lubrication system to cooling system to intake and exhaust systems to NVH For this second edition latest findings and design practices are included with the addition of over sixty new pictures and many new equations *Internal Combustion Engine Technology and Applications of Biodiesel Fuel* Enhua Wang, 2021-08-18 This book examines internal combustion engine technology and applications of biodiesel fuel It includes seven chapters in two sections The first section examines engine downsizing fuel spray and economic comparison The second section deals with applications of biodiesel fuel in compression ignition and spark ignition engines The information contained herein is useful for scientists and students looking to broaden their knowledge of internal combustion engine technologies and applications of biodiesel fuel *Introduction to Internal Combustion Engines* Richard Stone, 2017-09-16 Now in its fourth edition this textbook remains the indispensable text to guide readers through automotive or mechanical engineering both at university and beyond Thoroughly updated clear comprehensive and well illustrated with a wealth of worked examples and problems its combination of theory and applied practice aids in the understanding of internal combustion engines from thermodynamics and combustion to fluid mechanics and materials science This textbook is aimed at third year undergraduate or postgraduate students on mechanical or automotive engineering degrees New to this Edition Fully updated for changes in technology in this fast moving area New material on direct injection spark engines supercharging and renewable fuels Solutions manual online for lecturers **Tribological Processes in the Valve Train Systems with Lightweight Valves** Krzysztof Jan Siczek, 2016-06-17 Tribological Processes in Valvetrain Systems with Lightweight Valves New Research and Modelling provides readers with the latest methodologies to reduce friction and wear in valvetrain systems a severe problem for designers and manufacturers The solution is achieved by identifying the tribological processes and phenomena in the friction nodes of lightweight valves made of titanium alloys and ceramics both cam and camless driven The book provides a set of structured information on the current tribological problems in modern internal combustion engines from an introduction to the valvetrain operation to the processes that produce wear in the components of the valvetrain A valuable resource for teachers and students of mechanical or automotive engineering as well as automotive manufacturers automotive designers and tuning engineers Shows the tribological problems occurring in the guide light valve seat insert Combines numerical and experimental solutions of wear and friction processes in valvetrain

systems Discusses various types of cam and camless drives the valves used in valve trains of internal combustion engines both SI and CI Examines the materials used protective layers and geometric parameters of lightweight valves as well as mating guides and seat inserts

Racing Toward Zero Kelly Senecal, Felix Leach, 2021-06-01 In *Racing Toward Zero* the authors explore the issues inherent in developing sustainable transportation They review the types of propulsion systems and vehicle options discuss low carbon fuels and alternative energy sources and examine the role of regulation in curbing emissions All technologies have an impact on the environment from internal combustion engine vehicles to battery electric vehicles fuel cell electric vehicles and hybrids there is no silver bullet The battery electric vehicle may seem the obvious path to a sustainable carbon free transportation future but it is not the only nor necessarily the best path forward The vast majority of vehicles today use the internal combustion engine ICE and this is unlikely to change anytime soon Improving the ICE and its fuels entering a new ICE age must be a main route on the road to zero emissions How do we go green The future requires a balanced approach to transportation It is not a matter of choosing between combustion or electrification it is combustion and electrification As the authors say The future is eclectic By harnessing the best qualities of both technologies we will be in the best position to address our transportation future as quickly as possible ISBN 9781468601466 ISBN 9781468601473 ISBN 9781468602005 DOI 10 4271 9781468601473

Solving the Powertrain Puzzle Schaeffler Technologies GmbH & Co. KG, 2014-09-12 Every four years Schaeffler provides an insight into its latest developments and technologies from the engine transmission and chassis as well as hybridization and electric mobility sectors In 2014 the Schaeffler Symposium with the motto *Solving the Powertrain Puzzle* took place from 3th to 4th of April in Baden Baden Mobility for tomorrow is the central theme of this proceeding The authors are discussing the different requirements which are placed on mobility in different regions of the world In addition to the company's work in research and development a comprehensive in house mobility study also provides a reliable basis for the discussion The authors are convinced that there will be a paradigm shift in the automotive industry Issues such as increasing efficiency and advancing electrification of the powertrain automatic and semi automatic driving as well as integration in information networks will define the automotive future In addition the variety of solutions available worldwide will become increasingly more complex and mobility patterns will also change rapidly However this does not mean that cars will drive virtually in the future Powertrains based on internal combustion engines will still dominate for a very long time and demonstrate new strengths in combination with hybrid drives Transmissions will also gain in importance as the link between the internal combustion engine and electric motor The proceeding *Solving the Powertrain Puzzle* contains 34 technical papers from renowned experts and researchers in the field of automotive engineering
