

## Chapter 3

# Diodes, Problem Solutions

### 3.2 Problem 3.44

A square-wave source with 10 V peak-to-peak amplitude and zero average is applied to a circuit resembling that in Figure 3.43 and producing a 100 mA average. Assuming an ideal diode, what is the peak output voltage (in mV)? What is the peak diode current? What is the average diode current? What is the maximum average voltage across the diode?

Figure 3.43

### 3a Solution

The peak output voltage is

$$V_{p, \text{out}} = 100 \text{ mA} \cdot R_2$$

Richardson, Vignyan (Vigs) Chandra, 2023-05-26 Devices and Circuit Fundamentals is Chapter Outline Learning Objectives Key Terms Figure List Chapter Summary Formulas Answers to Examples Self Exams Glossary of Terms defined Transistor and Diode Network Problems and Solutions Harry E. Stockman, 1967 **Electron Dynamics of Diode Regions** Charles K. Birdsall, 1966-01-01 Electron Dynamics of Diode Regions describes the model construction and analysis of motion of charged particles of diode regions in time varying fields The models analyzed are simplified versions of parts of practical devices primarily active microwave devices tubes and semiconductor amplifiers while the most striking results obtained are due to electron inertia and space charge effects in terms of laboratory observable This book is composed of seven chapters and begins with an introduction to the general concepts of time dependent flow including induced current the techniques of linearization calculating variational transit time and obtaining equivalent circuits The following chapters present the classical linear analysis which includes the space charge effects with several applications These chapters also explore the existence of a maximum stable current in a space charge limited diode The discussion then shifts to the basics of high velocity klystron gap with nonuniform field distributions and the application of the multicavity klystron This text further covers the analysis and examples of crossed field gaps The final chapters deal with the fundamentals of velocity and current distributions obtained from common electron emitters with some attempt to show how the multivelocity streams evolve into single velocity equivalents needed for the methods of earlier chapters Results of applying the Lagrangian starting analysis to semiconductor diode regions necessarily from a new equation of motion are also provided This book is intended for graduate courses seminars and research studies Recent Metaheuristic Algorithms for Parameter Identification Erik Cuevas, Jorge Gálvez, Omar Avalos, 2019-09-03 This book presents new alternative metaheuristic developments that have proved to be effective in various complex problems to help researchers lecturers engineers and practitioners solve their own optimization problems It also bridges the gap between recent metaheuristic techniques and interesting identification system methods that benefit from the convenience of metaheuristic schemes by explaining basic ideas of the proposed applications in ways that can be understood by readers new to these fields As such it is a valuable resource for energy practitioners who are not researchers in metaheuristics In addition it offers members of the metaheuristic community insights into how system identification and energy problems can be translated into optimization tasks *Applied Mechanics Reviews*, 1967
