## Vocabulary

**9.4 Earth's Layered Structure:** crust, p. 233; mantle, p. 234; lithosphere, p. 234; asthenosphere, p. 235; outer core, p. 235; inner core, p. 235;

**9.1 Plate Tectonics:** continental drift, p. 246; Pangaea, p. 246; plate tectonics, p. 254; divergent boundary, p. 255; convergent boundary, p. 255; transform fault boundary, p. 255; ridge, p. 256; seafloor spreading, p. 256; subduction zone, p. 261; trench, p. 261; paleomagnetism, p. 265; hot spot, p. 268

## Reviewing Content

Choose the letter that best answers the question or completes the statement.

- What is the weaker, hotter zone beneath the lithosphere that allows for motion of Earth's rigid outer shell?
  - a. Crust
  - b. Asthenosphere
  - c. outer core
  - d. inner core
- Most of Earth's earthquakes, volcanoes, and mountain building occur
  - a. in the center of continents.
  - b. in the Himalayas.
  - c. at plate boundaries.
  - d. at volcanic island arcs.
- Alfred Wegener is best known for what hypothesis?
  - a. plate tectonics
  - b. seafloor spreading
  - c. continental drift
  - d. subduction
- Complex mountain systems such as the Himalayas are the result of
  - a. oceanic-oceanic convergence.
  - b. hot spots.
  - c. continental volcanic arcs.
  - d. continental-continental convergence.
- What is the type of plate boundary where two plates move together, causing one of the slabs of lithosphere to descend into the mantle beneath an overriding plate?
  - a. oceanic-continental convergent
  - b. Divergent
  - c. transform fault
  - d. continental-continental convergent
- One of the main objections to Wegener's hypothesis of continental drift was that he was unable to provide an acceptable
  - a. rate of continental drift.
  - b. date of continental drift.
  - c. mechanism of continental drift.
  - d. direction of continental drift.
- Which one of the following was NOT used as support of Wegener's continental drift hypothesis?
  - a. fossil evidence
  - b. Paleomagnetism
  - c. the fit of South America and Africa
  - d. ancient climates
- At what type of plate boundary do plates move apart, resulting in the upwelling of material from the mantle to create new seafloor?
  - a. Divergent
  - b. Convergent
  - c. transform fault
  - d. Subduction

Use the diagram below to answer Questions

- What feature is labeled B?
  - a. continental volcanic arc
  - b. a trench
  - c. continental lithosphere
  - d. an ocean ridge
- The process occurring at the location labeled D is
  - a. oceanic lithosphere being created.
  - b. continental lithosphere being created.
  - c. a continental-continental collision occurring.
  - d. oceanic lithosphere being subducted.

Brush, 2015-03-16 Historically the scientific method has been said to require proposing a theory making a prediction of something not already known testing the prediction and giving up the theory or substantially changing it if it fails the test A theory that leads to several successful predictions is more likely to be accepted than one that only explains what is already known but not understood This process is widely treated as the conventional method of achieving scientific progress and was used throughout the twentieth century as the standard route to discovery and experimentation But does science really work this way In *Making 20th Century Science* Stephen G Brush discusses this question as it relates to the development of science throughout the last century Answering this question requires both a philosophically and historically scientific approach and Brush blends the two in order to take a close look at how scientific methodology has developed Several cases from the history of modern physical and biological science are examined including Mendeleev's Periodic Law Kekule's structure for benzene the light quantum hypothesis quantum mechanics chromosome theory and natural selection In general it is found that theories are accepted for a combination of successful predictions and better

Brozo,1991 Earth's Climate Evolution Colin P. Summerhayes,2015-10-19 To understand climate change today we first need to know how Earth s climate changed over the past 450 million years Finding answers depends upon contributions from a wide range of sciences not just the rock record uncovered by geologists In Earth s Climate Evolution Colin Summerhayes analyzes reports and records of past climate change dating back to the late 18th century to uncover key patterns in the climate system The book will transform debate and set the agenda for the next generation of thought about future climate change The book takes a unique approach to the subject providing a description of the greenhouse and icehouse worlds of the past 450 million years since land plants emerged ignoring major earlier glaciations like that of Snowball Earth which occurred around 600 million years ago in a world free of land plants It describes the evolution of thinking in palaeoclimatology and introduces the main players in the field and how their ideas were received and in many cases subsequently modified It records the arguments and discussions about the merits of different ideas along the way It also includes several notes made from the author s own personal involvement in palaeoclimatological and palaeoceanographic studies and from his experience of working alongside several of the major players in these fields in recent years This book will be an invaluable reference for both undergraduate and postgraduate students taking courses in related fields and will also be of interest to historians of science and or geology climatology and oceanography It should also be of interest to the wider scientific and engineering community high school science students policy makers and environmental NGOs Reviews Outstanding in its presentation of the facts and a good read in the way that it intersperses the climate story with the author s own experiences This book puts the climate story into a compelling geological history Dr James Baker The book is written in very clear and concise prose and takes original enlightening and engaging approach to talking about ideas from the perspective of the scientists who promoted them
