Exhaust emissions from diesel engines are a substantial source of air pollution in this country. In recognition of this fact the Environmental Protection Agency has issued strict new regulations due to take effect in 1991 and 1994 that will drastically reduce the amount of some pollutants these engines will be allowed to emit. The technology is not currently available to produce diesel engines that can meet these regulations without large penalties in engine performance and efficiency. One technique that offers promise of being able to reduce emissions from both existing engines and new engines is alcohol fumigation.
