Embedded SoPC Design with Nios II Processor and Verilog Examples Pong P. Chu, 2012-05-14

Explores the unique hardware programmability of FPGA based embedded systems using a learn by doing approach to introduce the concepts and techniques for embedded SoPC design with Verilog An SoPC system on a programmable chip integrates a processor memory modules I O peripherals and custom hardware accelerators into a single FPGA field programmable gate array device In addition to the customized software customized hardware can be developed and incorporated into the embedded system as well allowing us to configure the soft core processor create tailored I O interfaces and develop specialized hardware accelerators for computation intensive tasks Utilizing an Altera FPGA prototyping board and its Nios II soft core processor Embedded SoPC Design with Nios II Processor and Verilog Examples takes a learn by doing approach to illustrate the hardware and software design and development process by including realistic projects that can be implemented and tested on the board Emphasizing hardware design and integration throughout the book is divided into four major parts Part I covers HDL and synthesis of custom hardware Part II introduces the Nios II processor and provides an overview of embedded software development Part III demonstrates the design and development of hardware and software of several complex I O peripherals including a PS2 keyboard and mouse a graphic video controller an audio codec and an SD secure digital card Part IV provides several case studies of the integration of hardware accelerators including a custom GCD greatest common divisor circuit a Mandelbrot set fractal circuit and an audio synthesizer based on DDFS direct digital frequency synthesis methodology While designing and developing an embedded SoPC can be rewarding the learning can be a long and winding journey This book shows the trail ahead and guides readers through the initial steps to exploit the full potential of this emerging methodology

Embedded SoPC Design with Nios II Processor and VHDL Examples Pong P. Chu, 2011-09-26

The book is divided into four major parts Part I covers HDL constructs and synthesis of basic digital circuits Part II provides an overview of embedded software development with the emphasis on low level I O access and drivers Part III demonstrates the design and development of hardware and software for several complex I O peripherals including PS2 keyboard and mouse a graphic video controller an audio codec and an SD secure digital card Part IV provides three case studies of the integration of hardware accelerators including a custom GCD greatest common divisor circuit a Mandelbrot set fractal circuit and an audio synthesizer based on DDFS direct digital frequency synthesis methodology The book utilizes FPGA devices Nios II soft core processor and development platform from Altera Co which is one of the two main FPGA manufactures Altera has a generous university program that provides free software and discounted prototyping boards for educational institutions details at www.altera.com/university The two main educational prototyping boards are known as DE1 99 and DE2 269 All experiments can be implemented and tested with these boards A board combined with this book becomes

a turn key solution for the SoPC design experiments and projects Most HDL and C codes in the book are device independent and can be adapted by other prototyping boards as long as a board has similar I O configuration

Field Programmable Logic and Applications Patrick Lysaght,James Irvine,Reiner Hartenstein,2004-06-22 This book contains the papers presented at the 9th International Workshop on Field ProgrammableLogic and Applications FPL 99 hosted by the University of Strathclyde in Glasgow Scotland August 30 September 1 1999 FPL 99 is the ninth in the series of annual FPL workshops The FPL 99 programme committee has been fortunate to have received a large number of high quality papers addressing a wide range of topics From these 33 papers have been selected for presentation at the workshop and a further 32 papers have been accepted for the poster sessions A total of 65 papers from 20 countries are included in this volume FPL is a subject area that attracts researchers from both electronic engine ing and computer science Whether we are engaged in research into soft ha ware or hard software seems to be primarily a question of perspective What is unquestionable is that the interaction of groups of researchers from di erent backgrounds results in stimulating and productive research As we prepare for the new millennium the premier European forum for searchers in eld programmable logic remains the FPL workshop Next year the FPL series of workshopswill celebrate its tenth anniversary The contribution of so many overseas researchers has been a particularly attractive feature of these events giving them a truly international perspective while the informal and convivial atmosphere that pervades the workshops have been their hallmark We look forward to preserving these features in the future while continuing to expand the size and quality of the events
