*Design of Systems on a Chip: Design and Test* Ricardo Reis, Marcelo Soares Lubaszewski, Jochen A.G. Jess, 2007-05-06  
This book is the second of two volumes addressing the design challenges associated with new generations of semiconductor technology. The various chapters are compiled from tutorials presented at workshops in recent years by prominent authors from all over the world. Technology productivity and quality are the main aspects under consideration to establish the major requirements for the design and test of upcoming systems on a chip.

*Cyber Physical Computing for IoT-driven Services* Vladimir Hahanov, 2018-01-30  
This book presents the cyber culture of micro macro cosmological and virtual computing. The book shows how these work to formulate explain and predict the current processes and phenomena monitoring and controlling technology in the physical and virtual space. The authors posit a basic proposal to transform description of the function truth table and structure adjacency matrix to a qubit vector that focuses on memory driven computing based on logic parallel operations performance. The authors offer a metric for the measurement of processes and phenomena in a cyberspace and also the architecture of logic associative computing for decision making and big data analysis. The book outlines an innovative theory and practice of design test simulation and diagnosis of digital systems based on the use of a qubit coverage vector to describe the functional components and structures. Authors provide a description of the technology for SoC HDL model diagnosis based on Test Assertion Blocks Activated Graph. Examples of cyber physical systems for digital monitoring and cloud management of social objects and transport are proposed. A presented automaton model of cosmological computing explains the cyclical and harmonious evolution of matter energy essence and also a space time form of the Universe.
