1.2:

1.2a. 77.65%

1.2b. 80.25%

1.2c. The control group had a higher percentage of patients experience improvement in symptoms.

1.2d. The recording may not be a hundred per cent accurate as there is a small gap between the two percentages so there might be a human error that has taken place.

1.6a. The main research of this study is to see their socio-economic class and the behaviour of the 129 students. The research is there to determine which socio-economic class they are in (low or high social class) and how unethical they may act by given them an option to take the chocolate or not. The research is also trying to see if there is a correlation between the two, so if the high social class will take more or less chocolate then the low social class.
