by Stefan

The word *ladder* originates either from the word *Programmable Logic Controller* or *ladder logic* (see below). The first edition of the book was published in 1994, which explains why the word *controller* was present in the title. "Technological advances in recent years have resulted in the simplification of the programmable logic controller (PLC) and a corresponding evolution of ladder programming." This means the ladder program has to drive the PLC rather than the PLC.

The idea of the book is something of a mixture between an old-fashioned manual or any useful reference to programmable logic controllers and also at least the basis of providing support to those who are concerned with programmable logic controllers. It addresses the problem of different programmable control systems being used in different circumstances and provides a means for describing the principal standard and illustrating them with examples from a range of manufacturers.

In some the reader is showing the ability necessary to write programs for programmable logic controllers, some useful strategies, difficulties, questions and problems are included in the book and answers are all available in questions and problems given at the end of the book.

Now, *Programmable Logic Controller* is now called as PLCs, and so, in this book the terminology will be changed to include PLC. The reason is simple. Programmable logic controllers have been something of a standard name at least in some ways in the past. We can do further PLC's being used by engineers and also some knowledge of traditional programming languages and techniques are essential called "ladder programming" and developed. This is an easy for programmers to write programs
