Statistical Methods For Eliciting Probability Distributions:

Uncertain Judgements Anthony O'Hagan, Caitlin E. Buck, Alireza Daneshkhah, J. Richard Eiser, Paul H. Garthwaite, David J. Jenkinson, Jeremy E. Oakley, Tim Rakow, 2006-08-30 Elicitation is the process of extracting expert knowledge about some unknown quantity or quantities and formulating that information as a probability distribution Elicitation is important in situations such as modelling the safety of nuclear installations or assessing the risk of terrorist attacks where expert knowledge is essentially the only source of good information It also plays a major role in other contexts by augmenting scarce observational data through the use of Bayesian statistical methods However elicitation is not a simple task and practitioners need to be aware of a wide range of research findings in order to elicit expert judgements accurately and reliably *Uncertain Judgements* introduces the area before guiding the reader through the study of appropriate elicitation methods illustrated by a variety of multi disciplinary examples This is achieved by Presenting a methodological framework for the elicitation of expert knowledge incorporating findings from both statistical and psychological research Detailing techniques for the elicitation of a wide range of standard distributions appropriate to the most common types of quantities Providing a comprehensive review of the available literature and pointing to the best practice methods and future research needs Using examples from many disciplines including statistics psychology engineering and health sciences Including an extensive glossary of statistical and psychological terms An ideal source and guide for statisticians and psychologists with interests in expert judgement or practical applications of Bayesian analysis *Uncertain Judgements* will also benefit decision makers risk analysts engineers and researchers in the medical and social sciences

Expert Judgement in Risk and Decision Analysis Anca M. Hanea, Gabriela F. Nane, Tim Bedford, Simon French, 2021-02-19 This book pulls together many perspectives on the theory methods and practice of drawing judgments from panels of experts in assessing risks and making decisions in complex circumstances The book is divided into four parts Structured Expert Judgment SEJ current research fronts the contributions of Roger Cooke and the Classical Model he developed process procedures and education and applications After an Introduction by the Editors the first part presents chapters on expert elicitation of parameters of multinomial models the advantages of using performance

weighting by advancing the random expert hypothesis expert elicitation for specific graphical models modelling dependencies between experts assessments within a Bayesian framework preventive maintenance optimization in a Bayesian framework eliciting life time distributions to parametrize a Dirichlet process and on an adversarial risk analysis approach for structured expert judgment studies The second part includes Roger Cooke s oration from 1995 on taking up his chair at Delft University of Technology one of the editors reflections on the early decade of the Classical Model development and use a current overview of the theory of the Classical Model providing a deep and comprehensive perspective on its foundations and its application and an interview with Roger Cooke The third part starts with an interview with Professor Dame Anne Glover who served as the Chief Scientific Advisor to the President of the European Commission It then presents chapters on the characteristics of good elicitation by reviewing those advocated and applied the design and development of a training course for SEJ and on specific experiences with SEJ protocols with the intention of presenting the challenges and insights collected during these journeys Finally the fourth and largest part begins with some reflections from Willy Aspinall on his many experiences in applying the Classical Model in several application domains it continues with related reflections on imperfect elicitation and then it presents chapters with applications on medicines policy and management supply chain cyber risk management geo political risks terrorism and the risks facing businesses looking to internationalise

Subjective Probability Distribution Elicitation in Cost Risk Analysis Lionel A. Galway, 2007 A cost estimate for a project such as the acquisition of a new aircraft or satellite system carries with it an inherent probability that the actual cost will exceed the estimate that changes in requirements technology the economic environment and a multitude of other factors that may occur over the life of the project will change the final cost One major approach to cost risk analysis the evaluating and quantifying of the uncertainty of a cost estimate has been probabilistic expressing the uncertainty in a cost estimate as a probability distribution over a range of potential costs Cost analysts in industry and government and researchers in statistics and management have often proposed that to get probability distributions for platforms using new and untried technologies expert judgment should be tapped and subjective probability distributions elicited from the experts to represent cost uncertainty This technical report reviews procedures for eliciting subjective probability distributions in cost risk analysis both in the cost risk field and in other disciplines in which elicitation has been a topic of research primarily statistics and psychology Because of a lack of empirical work in elicitation especially in cost risk the author also interviewed a number of senior people in the cost risk community who gave insight into the practices of the field This report should be of interest to cost analysis professionals who wish to quantify uncertainty when using expert opinions in cost risk analysis
