Java Software Solutions Adrienne Bloss, N. Jane Ingram, 2002-11 *Introduction to Java and Software Design* Nell B. Dale, Chip Weems, Mark R. Headington, 2003 Introduction to Java and Software Design breaks the current paradigms for teaching Java and object oriented programming in a first year programming course The Dale author team has developed a unique way of teaching object oriented programming They foster sound object oriented design by teaching students how to brainstorm use filtering scenarios CRC cards and responsibility algorithms The authors also present functional design as a way of writing algorithms for the class responsibilities that are assigned in the object oriented design Click here for downloadable student files This book has been developed from the ground up to be a Java text rather than a Java translation of prior works The text uses real Java I O

classes and treats event handling as a fundamental control structure that is introduced right from the beginning The authors carefully guide the student through the process of declaring a reference variable instantiating an object and assigning it to the variable Students will gradually develop a complete and comprehensive understanding of what an object is how it works and what constitutes a well designed class interface *Start Concurrent* Barry Wittman,Aditya Mathur,Tim Korb,2013-12-31

Multicore microprocessors are now at the heart of nearly all desktop and laptop computers While these chips offer exciting opportunities for the creation of newer and faster applications they also challenge students and educators How can the new generation of computer scientists growing up with multicore chips learn to program applications that exploit this latent processing power This unique book is an attempt to introduce concurrent programming to first year computer science students much earlier than most competing products This book assumes no programming background but offers a broad coverage of Java It includes over 150 numbered and numerous inline examples as well as more than 300 exercises categorized as conceptual programming and experiments The problem oriented approach presents a problem explains supporting concepts outlines necessary syntax and finally provides its solution All programs in the book are available for download and experimentation A substantial index of at least 5000 entries makes it easy for readers to locate relevant information In a fast changing field this book is continually updated and refined The 2014 version is the seventh draft edition of this volume and features numerous revisions based on student feedback A list of errata for this version can be found on the Purdue University Department of Computer Science website **Ivor Horton's Beginning Java** Ivor Horton,2011-09-27
