2.5 The Demographic Transition Model

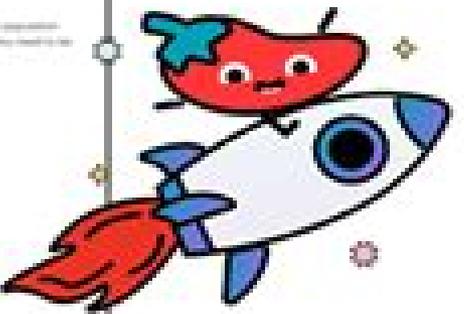

Demographic Transition Model

The Demographic Transition Model (DTM) is a model that describes the changes in a country's population over time. It is based on the idea that a country's population will grow as its birth rate increases and its death rate decreases.

Stage 1

Stage 1 is the initial stage of high birth rates and high death rates. Because of this, the natural increase rate is close to zero. The population grows slowly because the death rate is high and the birth rate is also high.
