Medical Data Analysis and Processing using Explainable Artificial Intelligence Om Prakash Jena, Mrutyunjaya Panda, Utku Kose, 2023-11-06 The text presents concepts of explainable artificial intelligence XAI in solving real world biomedical and healthcare problems It will serve as an ideal reference text for graduate students and academic researchers in diverse fields of engineering including electrical electronics and communication computer and biomedical Presents explainable artificial intelligence XAI based machine analytics and deep learning in medical science Discusses explainable artificial intelligence XAI with the Internet of Medical Things IoMT for healthcare applications Covers algorithms tools and frameworks for explainable artificial intelligence on medical data Explores the concepts of natural language processing and explainable artificial intelligence XAI on medical data processing Discusses machine learning and deep learning scalability models in healthcare systems This text focuses on data driven analysis and processing of advanced methods and techniques with the help of explainable artificial intelligence XAI algorithms It covers machine learning Internet of Things IoT and deep learning algorithms based on XAI techniques for medical data analysis and processing The text will present different dimensions of XAI based computational intelligence applications It will serve as an ideal reference text for graduate students and academic researchers in the fields of electrical engineering electronics and communication engineering computer engineering and biomedical engineering

Compendium of Neurosymbolic Artificial Intelligence Md Kamruzzaman Sarker, Aaron Eberhart, 2023-08-15 If only it were possible to develop automated and trainable neural systems that could justify their behavior in a way that could be interpreted by humans like a symbolic system The field of Neurosymbolic AI aims to combine two disparate approaches to AI symbolic reasoning and neural or connectionist approaches such as Deep Learning The quest to unite these two types of AI has led to the development of many innovative techniques which extend the boundaries of both disciplines This book Compendium of Neurosymbolic Artificial Intelligence presents 30 invited papers which explore various approaches to defining and developing a successful system to combine these two methods Each strategy has clear advantages and disadvantages with the aim of most being to find some useful middle ground between the rigid transparency of symbolic systems and the more flexible yet highly opaque neural applications The papers are organized by theme with the first four being overviews or surveys of the field These are followed by papers covering neurosymbolic reasoning neurosymbolic architectures various aspects of Deep Learning and finally two chapters on natural language processing All papers were reviewed internally before publication The book is intended to follow and extend the work of the previous book Neuro symbolic artificial intelligence The state of the art IOS Press 2021 which laid out the breadth of the field at that time Neurosymbolic AI is a young field which is still being actively defined and explored and this book will be of interest to those working in AI research and development
