Popular Science Arthur Mee, 1912     **Biology of Microorganisms** Thomas D. Brock, Michael T. Madigan, 1991     **Concepts in Biology** Eldon Enger, Frederick Ross, David Bailey, 2008-01-16 Enger Ross Bailey Concepts in Biology is a relatively brief introductory general biology text written for students with no previous science background. The authors strive to use the most accessible vocabulary and writing style possible while still maintaining scientific accuracy. The text covers all the main areas of study in biology from cells through ecosystems. Evolution and ecology coverage are combined in Part Four to emphasize the relationship between these two main subject areas. The new 13th edition is the latest and most exciting revision of a respected introductory biology text written by authors who know how to reach students through engaging writing, interesting issues and applications, and accessible level. Instructors will appreciate the book's scientific accuracy, complete coverage, and extensive supplement package.

, 1910     **Science**, 1928     *Ancient Monuments in the Countryside* Timothy Darvill, 2014-02-15 Much of England's rich archaeological heritage lies in the countryside. Many monuments such as barrows, hillforts, and Roman villas are familiar features of the landscape, while other sites lie buried or only partly visible. These remains are the result of the impact on the landscape of the countless generations of people who have lived, worked, and died within it. The cumulative effect is the landscape we know today, in which the historical dimension is an integral component of the valued whole and an important part of what most people in England are increasingly concerned to see protected and conserved. The archaeological heritage, however, is a finite and fragile resource, and much of it has been lost in the last two decades as a result of increasing pressures on farming, industry, and commerce to maximise the return on investment in the land. The conservation of what remains therefore needs to be given urgent consideration. This report has three main goals. First, it aims to present the background to the recognition, investigation, and management of the archaeological resource. Second, it attempts to review what is known of the resource, the threats currently posed to it, and the ways in which it can be exploited and conserved. Finally, it looks towards the development and promotion of a secure future for ancient monuments in the countryside.

Behavioural Ecology Etienne Danchin, Luc-Alain Giraldeau, Frank Cézilly, 2008-02-14 Behavioural Ecology gives a fresh contemporary account of the evolutionary and ecological processes that underpin animal behaviour. Contributions from subject experts and meticulous editing yield a text with all the qualities of a multi-author book but without the potential drawbacks.
