integration of chemical processes emphasizing the conceptual issues that are fundamental to the creation of the process  
Chemical process design requires the selection of a series of processing steps and their integration to form a complete  
manufacturing system The text emphasizes both the design and selection of the steps as individual operations and their  
integration Also the process will normally operate as part of an integrated manufacturing site consisting of a number of  
processes serviced by a common utility system The design of utility systems has been dealt with in the text so that the  
interactions between processes and the utility system and interactions between different processes through the utility system  
can be exploited to maximize the performance of the site as a whole
