Design and Implementation of Optimization Software H.J. Greenberg, 1978-11-30 This proceedings contains tutorials presented at the NATO Advanced Study Institute on Design and Implementation of Optimization Software Urbino Italy 20 June 2 July 1977 organized by the Committee on Algorithms COAL of the Mathematical Programming Society The authors are to be congratulated on their clear expositions plus their prompt cooperation We were especially fortunate to have had two of the first pioneers in designing mathematical programming systems W Orchard Hays and E M L Beale Surveying the contents the reader will find that the papers fall into three categories which we can roughly designate by linear programming extensions of linear programming and non linear programming In the first category on linear programming the three background papers by W Orchard Hays capture a historical perspective through the scope of modern systems while T J Dekker's paper provides background in numerical methods used in optimization software One area neglected by most previous mathematical programming symposia is the information structure employed to manipulate large volumes of data The tutorial on matrix packing by H J Greenberg includes modern structures including recent suggestions by J Kalan and D Rarick another tutorial on pivot selection describes the vast range of tactics that have evolved aimed at reducing computational effort with the strategy of the simplex method
