Seasonal Instrumentation of SHRP Pavements, the Ohio State University William Edward Wolfe,1998

Environmental instruments to measure temperature soil moisture and frost depth were installed at five test sections of the SHRP pavement project on U S 23 north of Delaware Ohio At three of these locations tensiometers which a designed to measure negative pore pressures were added to the instrumentation package The pore pressures as recorded by the tensiometers have increased from initially negative to positive values at each location and throughout the profile in the first year after installation of the instrument package was completed At the same time data collected from the moisture probes were showing a corresponding increase in soil moisture content Samples of an aggregate base and clayey subgrade material were collected at several locations on the DEL 23 project by ODOT They were delivered to the OSU soil mechanics laboratory for classification and permeability determination The aggregate base conformed to ODOT material specification Item 304 Measured permeability coefficients ranged between 2×10^{-6} to the minus 2 and 2.9×10^{-6} to the minus 2 cm sec The clayey material was classified as a low plasticity clay AASHTO Classification A 6 to A 7 6 with permeability coefficients ranging between 1×10^{-6} to the minus 6 and 4×10^{-8} to the minus 8 cm sec

Modified Sheet Pile Abutments for Low-volume Road Bridges Ryan Richard Evans,Wayne Klaiber,2012 To date there have been few investigations of the substructures in low volume road LVR bridges Steel sheet piling has the potential to provide an economical alternative to concrete bridge abutments but it needs investigation with regard to vertical and lateral load resistance construction methods and performance monitoring The objectives of this project were to develop a design approach for sheet pile bridge abutments for short span low volume bridges formulate an instrumentation and monitoring plan to evaluate performance of sheet pile abutment systems and understand the cost and construction effort associated with building the sheet pile bridge abutment demonstration project Three demonstration projects Boone Blackhawk and Tama Counties were selected for the design construction and monitoring of sheet pile abutments bridges Each site was unique and required site specific design and instrumentation monitoring The key findings from this study include the following 1 sheet pile abutment bridges provide an effective solution for LVR bridges 2 the measured stresses and deflection were different from the assumed where the differences reflect conservatism in the design and the complex field conditions and 3 additional research is needed to optimize the design
