Coduto, 2001 Using a design oriented approach that addresses geotechnical structural and construction aspects of foundation engineering this book explores practical methods of designing structural foundations while emphasizing and explaining how and why foundations behave the way they do It explains the theories and experimental data behind the design procedures and how to apply this information to real world problems Covers general principles performance requirements soil mechanics site exploration and characterization shallow foundations bearing capacity settlement spread footings geotechnical design spread footings structural design mats deep foundations axial load capacity full scale load tests static methods dynamic methods lateral load capacity structural design special topics foundations on weak and compressible soils foundation on expansive soils foundations on collapsible soils and earth retaining structures lateral earth pressures cantilever retaining walls sheet pile walls soldier pile walls internally stabilized earth retaining structures For geotechnical engineers soils engineers structural engineers and foundation engineers Foundation Design Donald P. Coduto, William A. Kitch, Man-chu Ronald Yeung, 2016 For graduate and undergraduate courses in Foundation Engineering Understanding and Practicing Foundation Design Principles Foundation Design Principles and Practices includes the most noteworthy research and advancements in Foundation Engineering Following a systematic approach of identifying major concepts followed by strategic analysis and design the Third Edition teaches readers not only how to understand foundation engineering but to apply it to real problems The highly up to date material places great emphasis on limit state design and includes a new focus on load and resistance factor design in both the structural and geotechnical aspects of the process *Foundation Design* Donald P. Coduto, 1994 Geotechnical Engineering Handbook Braja M. Das, 2011 The Geotechnical Engineering Handbook brings together essential information related to the evaluation of engineering properties of soils design of foundations such as spread footings mat foundations piles and drilled shafts and fundamental principles of analyzing the stability of slopes and embankments retaining walls and other earth retaining structures The Handbook also covers soil dynamics and foundation vibration to analyze the behavior of foundations subjected to cyclic vertical sliding and rocking excitations and topics addressed in some detail include environmental geotechnology and foundations for railroad beds *Construction Technology for Tall Buildings* M. Y. L. Chew, 2009 This book introduces the latest construction practices and processes for tall buildings from foundation to roof It attempts to acquaint readers with the methods materials equipment and systems used for the construction of tall buildings The text progresses through the stages of site investigation excavation and foundations basement construction structural systems for the superstructure site and material handling wall and floor construction cladding and roof construction The construction sequence merits and limitations of the various proprietary systems commonly used in these respective stages are discussed This third edition also includes several new topics not covered in the previous edition *Technology and Practice in Geotechnical Engineering*

Modified Sheet Pile Abutments for Low-volume Road Bridges Ryan Richard Evans, Wayne Klaiber, 2012 To date there have been few investigations of the substructures in low volume road LVR bridges Steel sheet piling has the potential to provide an economical alternative to concrete bridge abutments but it needs investigation with regard to vertical and lateral load resistance construction methods and performance monitoring The objectives of this project were to develop a design approach for sheet pile bridge abutments for short span low volume bridges formulate an instrumentation and monitoring plan to evaluate performance of sheet pile abutment systems and understand the cost and construction effort associated with building the sheet pile bridge abutment demonstration project Three demonstration projects Boone Blackhawk and Tama Counties were selected for the design construction and monitoring of sheet pile abutments bridges

Each site was unique and required site specific design and instrumentation monitoring The key findings from this study include the following 1 sheet pile abutment bridges provide an effective solution for LVR bridges 2 the measured stresses and deflection were different from the assumed where the differences reflect conservatism in the design and the complex field conditions and 3 additional research is needed to optimize the design
