papers from the IFAC Symposium Swansea 11-13 July 1988 where a forum was provided for discussion of the latest advances and techniques in the education of control and instrument engineers. Seven major topics were covered to aid lecturers in understanding developing and presenting systems engineering control and measurement as a subject to undergraduate and postgraduate students. The teaching of real time computer control as a topic and laboratory experiments for both continuous and discrete systems were discussed as was process control with the emphasis on providing the student with engineering experience by using scaled down equipment which would teach practical skills. Included in the Proceedings are papers on measurement and instrumentation an area felt to be neglected within academic instruction. The development of software tools for systems design within systems engineering was included as was the exchange of teaching packages and methods between academics and the education curriculum of systems engineering within developing countries. These Proceedings will prove to be a useful up to date guide and reference source for all lecturers and professors involved in curriculum development and the teaching of control and measurement in systems engineering.

Measurement and Instrumentation
Alan S. Morris, Reza Langari, 2011-09-12. Measurement and Instrumentation introduces undergraduate engineering students to the measurement principles and the range of sensors and instruments that are used for measuring physical variables. Based on Morris's Measurement and Instrumentation Principles this brand new text has been fully updated with coverage of the latest developments in such measurement technologies as smart sensors intelligent instruments microsensors digital recorders and displays and interfaces. Clearly and comprehensively written this textbook provides students with the knowledge and tools including examples in LABVIEW to design and build measurement systems for virtually any engineering application. The text features chapters on data acquisition and signal processing with LabVIEW from Dr Reza Langari Professor of Mechanical Engineering at Texas A M University. Early coverage of measurement system design provides students with a better framework for understanding the importance of studying measurement and instrumentation. Includes significant material on data acquisition coverage of sampling theory and linkage to acquisition processing software providing students with a more modern approach to the subject matter in line with actual data acquisition and instrumentation techniques now used in industry. Extensive coverage of uncertainty inaccuracy aids students ability to determine the precision of instruments. Integrated use of LabVIEW examples and problems enhances students ability to understand and retain content.
