*Global Optimization in Engineering Design* Ignacio E. Grossmann,2013-04-17 Mathematical Programming has been of

significant interest and relevance in engineering an area that is very rich in challenging optimization problems In particular many design and operational problems give rise to nonlinear and mixed integer nonlinear optimization problems whose modeling and solution is often nontrivial Furthermore with the increased computational power and development of advanced analysis e g process simulators finite element packages and modeling systems e g GAMS AMPL SPEEDUP ASCEND gPROMS the size and complexity of engineering optimization models is rapidly increasing While the application of efficient local solvers nonlinear programming algorithms has become widespread a major limitation is that there is often no guarantee that the solutions that are generated correspond to global optima In some cases finding a local solution might be adequate but in others it might mean incurring a significant cost penalty or even worse getting an incorrect solution to a physical problem Thus the need for finding global optima in engineering is a very real one It is the purpose of this monograph to present recent developments of techniques and applications of deterministic approaches to global optimization in engineering The present monograph is heavily represented by chemical engineers and to a large extent this is no accident The reason is that mathematical programming is an active and vibrant area of research in chemical engineering This trend has existed for about 15 years Optimization Techniques in Engineering Anita Khosla,Prasenjit Chatterjee,Ikbal Ali,Dheeraj Joshi,2023-05-31

OPTIMIZATION TECHNIQUES IN ENGINEERING The book describes the basic components of an optimization problem along with the formulation of design problems as mathematical programming problems using an objective function that expresses the main aim of the model and how it is to be either minimized or maximized subsequently the concept of optimization and its relevance towards an optimal solution in engineering applications is explained This book aims to present some of the recent developments in the area of optimization theory methods and applications in engineering It focuses on the metaphor of the inspired system and how to configure and apply the various algorithms The book comprises 30 chapters and is organized into two parts Part I Soft Computing and Evolutionary Based Optimization and Part II Decision Science and Simulation Based Optimization which contains application based chapters Readers and users will find in the book An overview and brief background of optimization methods which are used very popularly in almost all applications of science engineering technology and mathematics An in depth treatment of contributions to optimal learning and optimizing engineering systems Maps out the relations between optimization and other mathematical topics and disciplines A problem solving approach and a large number of illustrative examples leading to a step by step formulation and solving of optimization problems Audience Researchers industry professionals academicians and doctoral scholars in major domains of engineering production thermal electrical industrial materials design computer engineering and natural sciences The book is also suitable for researchers and postgraduate students in mathematics applied mathematics and industrial mathematics
