

# Integer Programming

Recall that we defined integer programming problems in our discussion of the Divisibility Assumption in Section 3.1. Simply stated, an *integer programming problem* (IP) is an LP in which some or all of the variables are required to be non-negative integers.<sup>1</sup>

In this chapter (as for LPs in Chapter 3), we find that many real-life situations may be formulated as IPs. Unfortunately, we will also see that IPs are usually much harder to solve than LPs.

In Section 9.1, we begin with necessary definitions and some introductory comments about IPs. In Section 9.2, we explain how to formulate integer programming models. We also discuss how to solve IPs on the computer with LINDO, LINGO, and Excel Solver. In Sections 9.3–9.8, we discuss other methods used to solve IPs.

## 9.1 Introduction to Integer Programming

An IP in which all variables are required to be integers is called a **pure integer programming problem**. For example,

$$\begin{aligned} \max z &= 3x_1 + 2x_2 \\ \text{s.t.} \quad &x_1 + x_2 \leq 6 \\ &x_1, x_2 \geq 0, x_1, x_2 \text{ integer} \end{aligned} \tag{1}$$

is a pure integer programming problem.

An IP in which only some of the variables are required to be integers is called a **mixed integer programming problem**. For example,

$$\begin{aligned} \max z &= 3x_1 + 2x_2 \\ \text{s.t.} \quad &x_1 + x_2 \leq 6 \\ &x_1, x_2 \geq 0, x_1 \text{ integer} \end{aligned}$$

is a mixed integer programming problem ( $x_2$  is not required to be an integer).

An integer programming problem in which all the variables must equal 0 or 1 is called a **0–1 IP**. In Section 9.2, we see that 0–1 IPs occur in surprisingly many situations.<sup>2</sup> The following is an example of a 0–1 IP:

$$\begin{aligned} \max z &= x_1 - x_2 \\ \text{s.t.} \quad &x_1 + 2x_2 \leq 2 \\ &2x_1 - x_2 \leq 1 \\ &x_1, x_2 = 0 \text{ or } 1 \end{aligned} \tag{2}$$

Solution procedures especially designed for 0–1 IPs are discussed in Section 9.7.

<sup>1</sup>A *nonlinear integer programming problem* is an optimization problem in which either the objective function or the left-hand side of some of the constraints are nonlinear functions and some or all of the variables must be integers. Such problems may be solved with LINDO or Excel Solver.

<sup>2</sup>Actually, any pure IP can be reformulated as an equivalent 0–1 IP (Section 9.7).

Hemmecke, Matthias Köppe, 2013-01-31 In recent years many new techniques have emerged in the mathematical theory of discrete optimization that have proven to be effective in solving a number of hard problems This book presents these recent advances particularly those that arise from algebraic geometry commutative algebra convex and discrete geometry generating functions and other tools normally considered outside of the standard curriculum in optimization These new techniques all of which are presented with minimal prerequisites provide a transition from linear to nonlinear discrete optimization This book can be used as a textbook for advanced undergraduates or first year graduate students in mathematics computer science or operations research It is also appropriate for mathematicians engineers and scientists engaged in computation who wish to gain a deeper understanding of how and why algorithms work *Electrical & Electronics Abstracts*, 1997 *Mathematical Reviews*, 2003 **Bulletin**, 1986 *Research Bulletin*, 1987

*Multicriteria Optimization* Matthias Ehrgott, 2006-01-16 Decision makers in many areas from industry to engineering and the social sector face an increasing need to consider multiple conflicting objectives in their decision processes In many cases these real world decision problems can be formulated as multicriteria mathematical optimization models The solution of such models requires appropriate techniques to compute so called efficient or Pareto optimal or compromise solutions that unlike traditional mathematical programming methods take the contradictory nature of the criteria into account This book provides the necessary mathematical foundation of multicriteria optimization to solve nonlinear linear and combinatorial problems with multiple criteria Motivational examples illustrate the use of multicriteria optimization in practice Numerous illustrations and exercises as well as an extensive bibliography are provided In the new edition a chapter on optimality conditions has been added The linear programming part has been extended and includes new developments Moreover motivational examples are now introducing the majority of chapters **Performance Evaluation of Non-linear Optimization**
