Approaches to Enhance the Performance of Simheuristic Methods in the Optimisation of Multi-echelon Logistics Distribution Networks Majsja Ammouriouva, 2021 Management of logistics distribution networks is a challenging task Decision makers rely on logistics assistance systems that recommend actions to optimise the networks These systems can be based on simheuristics to benefit from metaheuristics in exploring possible solutions and on simulation for modelling the networks This book presents three approaches to recommend promising solutions to optimise the networks with fewer simulation runs The first approach utilises information from the network to guide the search of metaheuristics In this approach domain specific information is defined and assigned to actions The metaheuristic algorithm utilises this domain specific information to find more promising solutions The second approach is reducing the number of possible solutions by grouping actions with respect to their domain specific attributes Here the smaller solution space decreases the number of required simulation runs The last approach looks for equivalent solutions that cause the same changes in the network This approach aims to skip unnecessary evaluations and thus simulation effort
