The last twenty years have seen major advances in the electronics industry Perhaps the most significant aspect of these advances has been the significant role that electronic equipment plays in almost all product markets Even though electronic equipment is used in a broad base of applications many future applications have yet to be conceived This versatility of electronics has been brought about primarily by the significant advances that have been made in integrated circuit technology The electronic product user is rarely aware of the integrated circuits within the equipment However the user is often very aware of the size weight mod ularity maintainability aesthetics and human interface features of the product In fact these are aspects of the products that often are instrumental in deter mining its success or failure in the marketplace Optimizing these and other product features is the primary role of Electronic Equipment Packaging Technology As the electronics industry continues to pro vide products that operate faster than their predecessors in a smaller space with a reduced cost per function the role of electronic packaging technology will assume an even greater role in the development of cost effective products      Catalog of Copyright Entries.
