

Introduction to Experimental Psychology

Experimental psychology is concerned with testing theories of human thoughts, feelings, actions and beyond any aspect of being human that involves the mind.

The word 'experimental' in this context means that tests are administered to participants, outcomes are measured and comparisons are made.

Experimental psychology features at least three central components that define it, empiricism, falsifiability and determinism.

Experimental psychology is an essential part of general Psychology (GOP). A psychology without the experimental part is today an anachronism.

Psychology is the scientific study of human behavior, animal behavior and mental processes, it is called scientific study because we have to observe and the observation can sometimes be biased. So we use scientific method and its characteristics like skepticism, accuracy, objectivity, and open mindedness.

Behavior includes all overt and covert reactions like talking, facial expressions etc. Mental process refers to all internal or covert activities of the mind like thinking, feeling, remembering etc.

The word 'Psychology' is a combination of two Latin words, i.e., 'psyche' meaning 'soul or mind' and 'logos' meaning 'study of a subject'. So the derivation of the word from Latin words gives its clear and obvious meaning.

Psychology has its roots in various disciplines which are philosophy, medicinal, biological and psychological sciences. Psychology is a basic and applied academic field that studies human mind and behavior. Research in psychology seeks to understand and explain thoughts, emotion and different behaviors.

Applications of psychology include mental health, treatment, performance enhancement and many other areas like sports, age etc affecting health and daily life.

Experimental Psychology is an area that utilizes scientific methods by other subject fields of Psychology to conduct research on mind and behavior from childhood development to social issues.

History of Experimental Psychology

History of Experimental Psychology started approximately from 1860.

Experimental Psychology emerged from the relationship of philosophy, psychology and sociology. In 1875 William James established an experimental laboratory in Harvard University but it could not get recognition.

The first recognized experimental laboratory of psychology was established by Wilhelm Wundt in 1879.

In the earlier stages of experimental psychology, several German scholars had contributed to new dimensions of psychology.

The first name that emerged was E.H. Weber (1795-1878), professor of anatomy (study of body structure) was founder of sensation, physiology and psychophysics further he formulated the principle of psychophysics named "Just Noticeable Difference" (JND) which explained the relationship between stimulus and response, that is known as Weber's Law.

Introduction To Experimental Psychology:

INTRODUCTION TO EXPERIMENTAL PSYCHOLOGY CHARLES SAMUEL. MYERS,2018 *An Introduction to Experimental Psychology* Charles Samuel Myers,1911 *An Introduction to Experimental Psychology* Charles Wilfred Valentine,1939 **An Introduction to Experimental Psychology** Charles Wilfrid Valentine,1936 [An Introduction to Experimental Psychology](#) Charles Samuel Myers,2012 **An Introduction to Experimental Design in Psychology** Robert L. Solso,Homer H. Johnson,1989 **Introduction to Experimental Psychology** Eva Conrad,1981 **An Introduction to Experimental Psychology** Charles S. Myers,2008 [An Introduction to Experimental Psychology](#) Charles Wilfred Valentine,1926 **An Introduction to Experimental Psychology** C. W. Valentine,2015-06-25 Excerpt from *An Introduction to Experimental Psychology In Relation to Education* In this little book an account is given of a number of psychological experiments which bear directly upon educational problems and on the work of the teacher in the school All the experiments described can be carried out without any apparatus except such as can easily be made with pen and paper The need for such a book has been for some time felt by many teachers and by those engaged in the training of teachers There is an unfortunate impression abroad that experimental psychology necessarily involves complicated and expensive apparatus For some types of experiments this is of course the case But fortunately for the educationist many of the experiments which are of the greatest interest and value for his special work have no such need No text book can take the place of a living teacher yet it is hoped that this book will be of value to the private student He should be able to carry out all the experiments here described in his own room and after gaining an intelligent grasp of the principles and methods discussed he will be able to apply many of them also in the schoolroom with results interesting to himself and very illuminating as regards the mental characteristics of his pupils Anything of this nature which helps to keep a teacher from becoming a slave of routine and which enlivens his interest in the mental life of each individual pupil is to be welcomed as a means of raising the whole level of his work About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books Find more at www.forgottenbooks.com This book is a reproduction of an important historical work Forgotten Books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy In rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition We do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works *The Psychologist At Work* M R Harrower,2013-11-05 This is Volume XII of thirty eight in the General Psychology series First published in 1937 this study offers an introduction to experimental psychology covering such areas as perception of our world primitive behaviour complex behaviour colour and sound memory learning and remembering and our emotional self **Introduction to Experimental Psychology** Douglas W. Matheson,Richard Loren Bruce,Kenneth L. Beauchamp,1968 **An Introduction**

An Introduction to Experimental Psychology Charles S. Myers, 1912 In writing this little book I have tried to keep in mind the purpose of the series to which it belongs Having selected various topics which may fairly be considered typical themes of research in Experimental Psychology I have endeavoured to present them in such a form as will give the educated reader a general notion of the scope of the science and of the experimental methods it employs Of course these various topics will not appeal in equal degrees to different interests PsycINFO Database Record c 2016 APA all rights reserved
