The ITIL guiding principles

Guiding principle	Description
Focus on value	Everything that the organization does needs to map, directly or indirectly, to value for the organization. The focus on value principle encompasses many perspectives, including the experience of customers and users. Do not wait that an opportunity will arise spontaneously without considering what is already available in the background. There is likely to be a great deal in the current services portfolio, programs, projects, and people that can be used to create the desired outcome.
Start where you are	The current state should be investigated and explained clearly to make sure it is fully understood. Do not attempt to do something all at once. Start with a small, achievable, realistic commitment to do so. By organizing work into smaller, manageable sections that can be completed and completed in a timely manner, the team can maintain a sharp focus on each effort.
Progress iteratively with feedback	Work in small, iterative, frequent, and often small, cycles. Do not wait until the end of the project to see if the work is done. Iterate, improve, and adapt. Work in small, iterative, frequent, and often small, cycles. Do not wait until the end of the project to see if the work is done. Iterate, improve, and adapt.
Collaborate and promote visibility	Working together across boundaries, roles, and responsibilities, and across the organization, to achieve the desired outcome.

Costs introduced

Achieving desired outcomes requires resources (and therefore costs) and is often associated with risk. Service providers help their customers to achieve outcomes and to design, take on, and manage the associated risks and costs. On the other hand, service relationships can introduce risks and costs, and in some cases, can negatively affect some of the intended outcomes after supporting others.

[Guerrilla Capacity Planning](#) Neil J. Gunther,2007-01-17 In these days of shortened fiscal horizons and contracted time to market schedules traditional approaches to capacity planning are often seen by management as tending to inflate their production schedules Rather than giving up in the face of this kind of relentless pressure to get things done faster Guerrilla Capacity Planning facilitates rapid forecasting of capacity requirements based on the opportunistic use of whatever performance data and tools are available in such a way that management insight is expanded but their schedules are not A key Guerrilla concept is tactical planning whereby short range planning questions and projects are brought up in team meetings such that management is compelled to know the answer and therefore buys into capacity planning without recognizing it as such Once you have your foot in the door capacity planning methods can be refined in an iterative cycle of improvement called The Wheel of Capacity Planning
