Artificial Intelligence Foundations Of Computational Agents:

Artificial Intelligence David L. Poole, Alan K. Mackworth, 2010-04-19 Recent decades have witnessed the emergence of artificial intelligence as a serious science and engineering discipline This textbook aimed at junior to senior undergraduate students and first year graduate students presents artificial intelligence AI using a coherent framework to study the design of intelligent computational agents By showing how basic approaches fit into a multidimensional design space readers can learn the fundamentals without losing sight of the bigger picture The book balances theory and experiment showing how to link them intimately together and develops the science of AI together with its engineering applications Although structured as a textbook the book's straightforward self contained style will also appeal to a wide audience of professionals researchers and independent learners AI is a rapidly developing field this book encapsulates the latest results without being exhaustive and encyclopedic The text is supported by an online learning environment AIspace <http://aispace.org> so that students can experiment with the main AI algorithms plus problems animations lecture slides and a knowledge representation system

Logic Programming and Nonmonotonic Reasoning James Delgrande, Wolfgang Faber, 2011-05-02 This volume contains the refereed proceedings of the 11th International Conference on Logic Programming and Nonmonotonic Reasoning LPNMR 2011 held in May 2011 in Vancouver Canada The 16 revised full papers 13 technical papers 1 application description and 2 system descriptions and 26 short papers 16 technical papers 3 application description and 7 system descriptions which were carefully reviewed and selected from numerous submissions are presented together with 3 invited talks Being a forum for exchanging ideas on declarative logic programming nonmonotonic reasoning and knowledge representation the conference aims to facilitate interactions between those researchers and practitioners interested in the design and implementation of logic based programming languages and database systems and those who work in the area of knowledge representation and nonmonotonic reasoning Artificial

Learning Shoab Irfan Mohammed , 2025-10-29 Artificial Intelligence AI and Machine Learning ML are rapidly advancing fields that focus on creating systems capable of performing tasks that normally require human intelligence These tasks include learning from experience recognizing patterns making decisions solving problems and adapting to new situations Artificial Intelligence is the broader concept that aims to build intelligent machines Machine Learning is a subset of AI that enables systems to automatically learn and improve from data without being explicitly programmed **Human-Centered AI** Ben Shneiderman, 2022-01-13 The remarkable progress in algorithms for machine and deep learning have opened the doors to new opportunities and some dark possibilities However a bright future awaits those who build on their working methods by including HCAI strategies of design and testing As many technology companies and thought leaders have argued

the goal is not to replace people but to empower them by making design choices that give humans control over technology In Human Centered AI Professor Ben Shneiderman offers an optimistic realist s guide to how artificial intelligence can be used to augment and enhance humans lives This project bridges the gap between ethical considerations and practical realities to offer a road map for successful reliable systems Digital cameras communications services and navigation apps are just the beginning Shneiderman shows how future applications will support health and wellness improve education accelerate business and connect people in reliable safe and trustworthy ways that respect human values rights justice and dignity

Cura Animarum Ioan C. Veres,2025-04-25 As artificial intelligence advances healthcare faces a profound ethical question Can machines truly care This book critically examines the rise of AI driven social robots carebots in patient care evaluating their benefits and potential harms through the lens of Christian ethics While AI may enhance efficiency and offer support in specific healthcare contexts it also risks dehumanizing care replacing genuine human presence with technological substitutes Grounded in a theology of covenant care this work builds its ethical argument around the biblical parable of the Good Samaritan emphasizing the irreplaceable nature of human compassion It presents theological and ethical criteria to guide the responsible use of AI in healthcare ensuring that technology serves rather than supplants the dignity of human relationships This book is essential reading for theologians ethicists healthcare professionals and AI developers navigating the intersection of faith ethics and emerging technology As healthcare increasingly integrates AI Cura Animarum challenges readers to consider where technology supports human dignity and where it threatens to erode the essence of genuine care Is AI merely a tool or does it risk redefining what it means to care
