Engineering Economy and the Decision-making Process Joseph C. Hartman, 2007 For undergraduate introductory courses in Engineering Economics This text presents engineering economy in the context of a decision making framework such that the student understands the necessary tools and their application It begins with an introduction to the basics of engineering economy interest time value of money and equivalence then explores the entire decision making process from defining the problem through post implementation analysis just as one would when building a case for management in order to make a capital investment decision

Optimal Control of Age-structured Populations in Economy, Demography, and the Environment Raouf Boucekkine, Natali Hritonenko, Yuri Yatsenko, 2013-05-13 This book covers a wide range of topics within mathematical modelling and the optimization of economic demographic technological and environmental phenomena Each chapter is written by experts in their field and represents new advances in modelling theory and practice These essays are exemplary of the fruitful interaction between theory and practice when exploring global and local changes The unifying theme of the book is the use of mathematical models and optimization methods to describe age structured populations in economy demography technological change and the environment Emphasis is placed on deterministic dynamic models that take age or size structures delay effects and non standard decision variables into account In addition the contributions deal with the age structure of assets resources and populations under study Interdisciplinary modelling has enormous potential for discovering new insights in global and regional development *Optimal Control of Age structured Populations in Economy Demography and the Environment* is a rich and excellent source of information on state of the art modelling expertise and references The book provides the necessary mathematical background for readers from different areas such as applied sciences management sciences and operations research which helps guide the development of practical models As well as this the book also surveys the current practice in applied modelling and looks at new research areas for a general mathematical audience This book will be of interest primarily to researchers postgraduate students as well as a wider scientific community including those focussing on the subjects of applied mathematics environmental sciences economics demography management and operations research

Engineering Economics and Financial Accounting Giri Raj Kadayat, Janak Raj Joshi, Avinash Reddy Aitha, Bhola Khan , 2025-11-24 *Engineering Economics and Financial Accounting* provides a comprehensive understanding of economic principles and accounting practices essential for engineering decision making The course covers cost estimation demand and supply analysis value engineering and economic feasibility studies of engineering projects Students learn the fundamentals of financial accounting including journal entries ledgers financial statements depreciation and budgeting By integrating economic evaluation with financial analysis the course equips learners to make cost effective profitable and sustainable engineering and managerial decisions

Reliability and Life-Cycle Analysis of Deteriorating Systems Mauricio Sánchez-Silva, Georgia-Ann Klutke, 2015-11-27 This book compiles and

critically discusses modern engineering system degradation models and their impact on engineering decisions In particular the authors focus on modeling the uncertain nature of degradation considering both conceptual discussions and formal mathematical formulations It also describes the basics concepts and the various modeling aspects of life cycle analysis LCA It highlights the role of degradation in LCA and defines optimum design and operation parameters Given the relationship between operational decisions and the performance of the system s condition over time maintenance models are also discussed The concepts and models presented have applications in a large variety of engineering fields such as Civil Environmental Industrial Electrical and Mechanical engineering However special emphasis is given to problems related to large infrastructure systems The book is intended to be used both as a reference resource for researchers and practitioners and as an academic text for courses related to risk and reliability infrastructure performance modeling and life cycle assessment Mathematical Modeling in Economics, Ecology and the Environment Natali Hritonenko, Yuri

Yatsenko, 2014-01-08 Updated to textbook form by popular demand this second edition discusses diverse mathematical models used in economics ecology and the environmental sciences with emphasis on control and optimization It is intended for graduate and upper undergraduate course use however applied mathematicians industry practitioners and a vast number of interdisciplinary academics will find the presentation highly useful Core topics of this text are Economic growth and technological development Population dynamics and human impact on the environment Resource extraction and scarcity Air and water contamination Rational management of the economy and environment Climate change and global dynamics The step by step approach taken is problem based and easy to follow The authors aptly demonstrate that the same models may be used to describe different economic and environmental processes and that similar investigation techniques are applicable to analyze various models Instructors will appreciate the substantial flexibility that this text allows while designing their own syllabus Chapters are essentially self contained and may be covered in full in part and in any order Appropriate one and two semester courses include but are not limited to Applied Mathematical Modeling Mathematical Methods in Economics and Environment Models of Biological Systems Applied Optimization Models and Environmental Models Prerequisites for the courses are Calculus and preferably Differential Equations *Advances in Information and Communication* Kohei Arai, 2021-04-12 This book aims to provide an international forum for scholarly researchers practitioners and academic communities to explore the role of information and communication technologies and its applications in technical and scholarly development The conference attracted a total of 464 submissions of which 152 submissions including 4 poster papers have been selected after a double blind review process Academic pioneering researchers scientists industrial engineers and students will find this series useful to gain insight into the current research and next generation information science and communication technologies This book discusses the aspects of communication data science ambient intelligence networking computing security and Internet of things from classical to intelligent scope The authors hope that readers find

the volume interesting and valuable it gathers chapters addressing state of the art intelligent methods and techniques for solving real world problems along with a vision of the future research
