Urban Heat Stress and Mitigation Solutions Vincenzo Costanzo,Gianpiero Evola,Luigi Marletta,2021-09-08 This book provides the reader with an understanding of the impact that different morphologies construction materials and green coverage solutions have on the urban microclimate thus affecting the comfort conditions of urban inhabitants and the energy needs of buildings in urban areas The book covers the latest approaches to energy and outdoor comfort measurement and modelling on an urban scale and describes possible measures and strategies to mitigate the effects of the mutual interaction between urban settlements and local microclimate Despite its relevance only limited literature is currently devoted to appraising from an engineering perspective the intertwining relationships between urban geometry and fabrics energy fluxes between buildings and their surroundings outdoor microclimate conditions and building energy demands in urban areas This book fills this gap by first discussing the physical processes that govern heat and mass transfer at an urban scale while emphasizing the role played by different spatial arrangements manmade materials and green infrastructures on the outdoor microclimate The first chapters also address the implications of these factors on the outdoor comfort conditions experienced by pedestrians and on the buildings energy demand for space heating and cooling Then based upon cutting edge experimental activities and simulation work this book demonstrates current and forthcoming adaptation and mitigation strategies to improve the urban microclimate and its impact on the built environment such as cool materials thermochromic and retroreflective finishing materials and green infrastructures applied either at a building scale or at the urban scale The effect of these solutions is demonstrated for different cities worldwide under a range of climate conditions Finally the book opens a wider perspective by introducing the basic elements that allow fuel poverty raw materials consumption and the principles of circular economy in the definition of a resilient urban settlement

[Solution Sets for Net Zero Energy Buildings](#) Françios Garde,Joseph Ayoub,Laura Aelenei,Daniel Aelenei,Alessandra Scognamiglio,2017-03-01 Net Zero Energy Buildings have been the object of numerous studies in recent years as various countries have set this performance level as a long term goal of their energy policies This book presents a unique study of 30 NZEBs that have been constructed and have had their performance measured for at least 12 months The study is based upon an international collaborative research initiated by the International Energy Agency the Solar Heating and Cooling Programme SHC It is the first book to evaluate building strategies in houses educational buildings and offices that have been demonstrated to work in practice It examines how the design challenges of climate and building type have been addressed and to what extent the

various design approaches have been successful This book presents convincing evidence that a careful re thinking of conventional design norms can achieve a far greater performance benefit than is normally feasible It identifies solution sets that work at the whole building level and at the individual building design challenge level for each climate and building type In doing so the book provides guidance as to how to improve the design by learning from these cases Unusually for a book of this type it has examples of buildings in what are conventionally labeled hot and cold climates A simple process is proposed for the reader to commission the analysis of their own climate to assess not only the conventional measure of how hot or cold or humid it is but also to assess its suitability to support other NZEB technical challenge solutions sets such as Daylight or Natural Ventilation or comfort based climate conditioning *Mechanical and Electrical Equipment for Buildings* Walter T. Grondzik, Alison G. Kwok, Benjamin Stein, John S. Reynolds, 2011-01-31 For more than half a century this book has been a fixture in architecture and construction firms the world over Twice awarded the AIA s Citation for Excellence in International Architecture Book Publishing *Mechanical and Electrical Equipment for Buildings* is recognized for its comprehensiveness clarity of presentation and timely coverage of new design trends and technologies Addressing mechanical and electrical systems for buildings of all sizes it provides design guidelines and detailed design procedures for each topic covered Thoroughly updated to cover the latest technologies new and emerging design trends and relevant codes this latest edition features more than 2 200 illustrations 200 new to this edition and a companion Website with additional resources
