Thorp, 2023-10-31 Identification and Ecology of Freshwater Arthropods in the Mediterranean Basin covers the entire Mediterranean basin including parts of Europe Asia Africa and the Mediterranean islands but excluding other biogeographic locations with Mediterranean climates located outside the region The book provides an extensive description of the taxonomy and ecology of aquatic arthropods encountered in lentic and lotic habitats as well as in less studied underground and estuarine habitats It offers expanded taxonomic identification keys to major groups of arthropods with a description of their ecology and distribution Keys for insects include aquatic larval stages and water dwelling adults of Coleoptera and Heteroptera Additional sections focus on taxa that can be encountered in adjacent brackish and estuary ecosystems as long as the taxon primarily occurs in freshwaters This is a much needed comprehensive resource on the taxonomy and ecology of freshwater arthropods with an introduction to recent molecular tools for identifications It will be particularly useful for freshwater ecologists limnologists environmentalists and students in the ecological sciences Presents taxonomic keys to genera and species to the majority of aquatic arthropod families Provides coverage of all freshwater ecosystems of the Mediterranean basin with case studies and examples Includes numerous photographs of the aquatic arthropods described in the chapters Covers the ecology and taxonomy of organisms living in more traditionally studied lakes and streams as well as in less studied underground and estuarine habitats [The Routledge Handbook of Landscape Ecology](#) Robert A. Francis, James D.A. Millington, George L.W. Perry, Emily S. Minor, 2021-09-08 The Handbook provides a supporting guide to key aspects and applications of landscape ecology to underpin its research and teaching A wide range of contributions written by expert researchers in the field summarize the latest knowledge on landscape ecology theory and concepts landscape processes methods and tools and emerging frontiers Landscape ecology is an interdisciplinary and holistic discipline and this is reflected in the chapters contained in this Handbook Authors from varying disciplinary backgrounds tackle key concepts such as landscape structure and function scale and connectivity landscape processes such as disturbance flows and fragmentation methods such as remote sensing and mapping fieldwork pattern analysis modelling and participation and engagement in landscape planning and emerging frontiers such as ecosystem services landscape approaches to biodiversity conservation and climate change Each chapter provides a blend of the latest scientific understanding of its focal topics along with considerations and examples of their application from around the world An invaluable guide to the concepts methods and applications of landscape ecology this book will be an important

Climate Change Impacts on Tropical Forests in Central America Aline Chiabai,2015-09-25 The loss of biodiversity is a major environmental problem in nearly every terrestrial ecosystem on Earth This loss is accelerating driven by climate change as well as by other causes including agricultural exploitation fragmentation and degradation triggered by land use changes The crucial issue under debate is the impact on the welfare of current and future population and the role of humans in the exploitation of natural resources This is of particular importance in Central America which it is amongst the richest and most threatened biodiversity regions on the Earth and where the loss of ecosystems strongly affects its socio economic vulnerability This book addresses the impacts of climate and land use change on tropical forest ecosystems in this important region and assesses the expected economic costs if no policy action is taken under different future scenarios and for different geographical scales This innovative collection utilises both theoretical approaches and empirical results to provide a conceptual framework for an integrated analysis of climate and land use change impacts on forest ecosystems and related economic effects offering insight into the complex relationship between ecosystems and benefits to humans This important contribution to forest ecosystems and climate change provides invaluable reading for students and scholars in the fields of environmental and ecological economics environmental science and forestry natural resource management agriculture and climate change

Breeding in a World of Scarcity Isabel Roldán-Ruiz,Joost Baert,Dirk Reheul,2016-06-13 This book includes papers presented at the 2015 meeting of the Fodder Crops and Amenity Grasses Section of Eucarpia The theme of the meeting Breeding in a world of scarcity was elaborated in four sessions 1 scarcity of natural resources 2 scarcity of breeders 3 scarcity of land and 4 scarcity of focus Parts I to IV of this book correspond to these four sessions Session 1 refers to the consequences of climate change reduced access to natural resources and declining freedom in using them Plant breeding may help by developing varieties with a more efficient use of water and nutrients and a better tolerance to biotic and abiotic stresses Session 2 refers to the shrinking number of field breeders There is a need for a mutual empathy between field and lab oriented breeding activities integrating new methods of phenotyping and genotyping Session 3 underscores the optimal use of agricultural land Forage needs to be intensively produced in a sustainable way meeting the energy protein and health requirements of livestock Well adapted varieties species and mixtures of grasses and legumes are needed Session 4 refers to the fading of focus in primary production triggered by a range of societal demands There are few farmers left and they are asked to meet many consumer demands Both large scale multi purpose species and varieties and specialized niche crops are required Part V summarizes the conclusions of two open debates two working group meetings and two workshops held during the conference The debates were devoted to the future of grass and fodder crop

breeding and to feed quality breeding and testing The conference hosted meetings of the working groups Multisite rust evaluation and Festulolium Workshops focused on genomic selection and association mapping and on phenotyping with applications in practical breeding research Part V contains also short sketches of breeding ideas presented as short communications
