**Mathematical Learning Models – Theory and Algorithms** U. Herkenrath, D. Kalin, W. Vogel, 2012-12-06 This volume contains most of the contributions presented at the conference Mathematical Learning Models Theory and Algorithms The conference was organized by the Institute of Applied Mathematics of the University of Bonn under the auspices of the Sonderforschungsbereich 72 It took place in the Physikzentrum in Bad Honnef near to Bonn from May 3 May 7 1982 The idea of the organizers was to bring together experts who work on very related problems but partially by using different approaches The main subjects of the program were mathematical learning models bandit problems stochastic approximation procedures sequential decision processes with unknown law of nature We felt that in a sense learning was a common concept for all these branches In the contributions the state of the art in the above topics was presented from different points of view with special regard to recent advances The exchange of results and opinions was continued in many fruitful and vivid discussions The atmosphere of the conference center offered a suitable and pleasant framework for the scientific program We express our gratitude to all contributors for making the conference successful Simultaneously we hope that further work on the above mentioned field has been stimulated *Mathematical Questions and Solutions, from the "Educational Times"*

W. J. C. Miller, 1883 **Decolonising Science, Technology, Engineering and Mathematics (STEM) in an Age of Technocolonialism** Nhemachena, Artwell, Hlabangane, Nokuthula, Matowanyika, Joseph Z. Z., 2020-03-02 Positing the notions of coloniality of ignorance and geopolitics of ignorance as central to coloniality and colonisation this book examines how colonialists socially produced ignorance among colonised indigenous peoples so as to render them docile and manageable Dismissing colonial descriptions of indigenous people as savages illiterate irrational prelogical mystical primitive barbaric and backward the book argues that imperialists colonialists contrived geopolitics of ignorance wherein indigenous regions were forced to become ignorant hence containable and manageable in the imperial world Questioning the provenance of modernist epistemologies the book asks why Eurocentric scholars only contest the provenance of indigenous knowledges artefacts and scientific collections Interrogating why empire sponsors the decolonisation of universities epistemologies in indigenous territories while resisting the repatriation restitution of indigenous artefacts the book also wonders why Westerners who still retain indigenous artefacts skulls and skeletons in their museums universities and private collections do not consider such artefacts and skulls to be colonising them as well The book is valuable to scholars and activists in the fields of anthropology museums and heritage studies science and technology studies decoloniality policymaking education politics sociology and development studies *Mathematical Modeling of Inland Vessel Maneuverability Considering Rudder Hydrodynamics* Jialun Liu, 2020-05-11 This book demonstrates that different rudder configurations have different hydrodynamic characteristics which are influenced by the profile the parameters and the specific configuration The author proposes new regression formulas to help naval architects quickly estimate the rudder

induced forces and moments in maneuvering Furthermore the author proposes and validates an integrated maneuvering model for both seagoing ships and inland vessels Using the proposed regression formulas and maneuvering model the specific impacts of rudder configurations on inland vessel maneuverability are studied In turn the book demonstrates the application of Reynolds Averaged Navier Stokes RANS simulations to obtain rudder hydrodynamic characteristics and the integration of the RANS results into maneuvering models as an accurate estimation of rudder forces and moments needed to quantify the impacts of rudder configurations on ships maneuvering performance In addition the author proposes new criteria for the prediction and evaluation of inland vessel maneuverability Simulations of ships with various rudder configurations are presented in order to analyze the impacts of rudder configurations on ship maneuverability in different classic and proposed test maneuvers Offering essential guidance on the effects of rudders for inland vessel maneuverability and helping practical engineers make informed design choices the book is of interest to researchers and academics in the field of naval engineering as well as students of naval architecture Industrial practitioners working on ship design may also find it beneficial

**Advances in Mathematical Inequalities** Shigeru Furuichi,2020-01-20 Mathematical inequalities are essential tools in mathematics natural science and engineering This book gives an overview on recent advances Some generalizations and improvements for the classical and well known inequalities are described They will be applied and further developed in many fields Applications of the inequalities to entropy theory and quantum physics are also included
