Handbook of Race-Ethnicity and Gender in Psychology Marie L. Miville,Angela D. Ferguson,2014-02-06

Multicultural aspects of psychology have received some attention in the literature in the last decade A number of texts currently address these significant concerns for example Counseling the Culturally Different Sue Handbook of Multicultural Counseling Poterotto et l 2009 and Handbook of Multicultural Counseling Competencies Pope Davis Coleman 2005 In their most recent editions several of these books address more nuanced complexities of diversity for example the intersections of gender or social class with race ethnicity Meanwhile other texts have addressed gender issues in psychology Handbook of Counseling Women Counseling Men with some attention paid to racial ethnic and other diversity concerns Clearly the progression of scholarship in this field reflects the importance of incorporating multiple aspects of diversity within psychology However no book currently exists that fully addresses the complexities of race ethnicity and gender together Better understanding of the dual impact of race ethnicity and gender on psychological functioning may lead to more effective conceptualizations of a number of mental health issues such as domestic violence addictions health related behaviors and achievement Exploring the impact of race ethnicity and gender also may provide a broader understanding of self in community as this affects individuals families and other social groups and work and career development Topics of interest may include identity development worldviews and belief systems parenting styles interventions for promoting resilience and persistence and strategies for enhancing more accurate diagnostic and treatment modalities Today s world is comprised of multiple and intersecting communities that remain in need of psychological models and interventions that support and promote both individual and collective mental health We believe that utilizing unidimensional conceptual models e g focusing solely on race ethnicity or gender no longer adequately addresses psychological concerns that are dynamic complex and multi faceted The proposed Handbook will focus on timely topics which historically have been under addressed for a number of diverse populations

This necessitates the inclusion of the research reporting and the development of professionalism in the research area. This comprehensive textbook will be an invaluable reference guide for undergraduate and postgraduate students and doctoral scholars across various disciplines like social sciences, management education and allied fields. It will also appeal to readers interested in the intersections of education research and societal development. Pedagogically rich, this book ensures relevance and practicality for students to equip them with research.

Macro cognition: The Science and Engineering of Sociotechnical Work Systems Paul Ward, Robert R. Hoffman, Gareth E. Conway, Jan Maarten Schraagen, David Peebles, Robert J. B. Hutton, Erich J. Petushek, 2018-02-28

The increasing complexity of work systems and changes in the nature of workplace technology over the past century have resulted in an exponential shift in the nature of work activities from physical labor to cognitive work. Modern work systems have many characteristics that make them cognitively complex. They can be highly interactive, comprised of multiple agents and artifacts, information may be limited and distributed across space and time, task goals are frequently ill defined, conflicting, dynamic and emergent, planning may only be possible at general levels of abstraction or require adaptive solutions, some degree of proficiency or expertise is required, the stakes are often high and uncertainty, time constraints and stress are seldom absent. To complicate matters further, cognition in complex work settings is typically constrained by broader professional, organizational and institutional practice and policy. These features of cognitive work present significant challenges to scientific methodology and theory and subsequent design of reliable interventions. Historically, philosophers and scientists have attempted to understand the mental activities experienced during cognitive work at multiple levels of analysis using divergent methods. Some have examined cognition at an associative, contextual, functional or holistic level, relying on naturalistic methods to understand the higher mental processes as they work in harmony during goal directed behavior. Others have embraced experimental methods and favored internal over external validity, often reducing cognition to a psychology of fundamental acts such as short term memory access with millisecond shifts in attention. More recently, Macro cognition has evolved as a complementary paradigm. Macro cognitive researchers have studied the cognitive functions and processes associated with skilled, adaptive, collaborative and resilient cognitive work in the context of the aforementioned complexities of psychotechnical and sociotechnical work systems. Typically, this research has been carried out using cognitive task analytic techniques that draw on both naturalistic and quasi experimental methods. The primary goals of research in Macro cognition are to better understand cognitive adaptations to complexity, to increase our theoretical understanding of the organism-environment relations by studying the mapping between cognitive work and real world demands, and to promote use inspired research capable of improving system performance.
