

Figure 7: Simplified Data Model for Material Document

The SAP ERP stock inventory management data model consists of the two document tables, MKPF for document header information and MSEG for document item data. Additionally, aggregated actual stock quantity data was stored in several tables, as follows:

- 26 tables containing inventory aggregates for two material master tables (MARC/MARD)
- 11 tables for particular stock types
- 13 tables for historic stock figures

With SAP S/4HANA, this data model has been changed significantly. The new table, MATDOC, has been introduced, which contains the former header and item data of a material document, as well as many further attributes. This table forms the basis for the on-the-fly-aggregation. In addition, we have semantically corrected the material master data table, which supports table buffering on an application server level.

Overall, this has resulted in an ultra-thin data layer that cannot be stripped down any further. Further reduction of the tables and functionality would not lead to more simplification, but to data loss. Simplification does not cause reduction; simplification provides the features in a simpler manner. Only primary information is left, all secondary (redundant) information is removed.

Material Ledger Obligatory for Material Valuation

With SAP S/4HANA, it is obligatory to use the Material Ledger. Latest trends in material management aim for improved and more flexible valuation methods in multiple currencies and parallel accounting standards while simultaneously reducing required system resources and improving scalability of the business processes. Since the data model of the Material Ledger (ML) module supports these business requirements, it was chosen as the basis for material inventory valuation in the new solution SAP S/4HANA.
