#### Security Tokens Kevin

Roebuck, 2011 A security token or sometimes a hardware token hard token authentication token USB token cryptographic token or key fob may be a physical device that an authorized user of computer services is given to ease authentication The term may also refer to software tokens Security tokens are used to prove one's identity electronically as in the case of a customer trying to access their bank account The token is used in addition to or in place of a password to prove that the customer is who they claim to be The token acts like an electronic key to access something Hardware tokens are typically

small enough to be carried in a pocket or purse and often are designed to attach to the user's keychain. Some may store cryptographic keys such as a digital signature or biometric data such as a fingerprint minutiae. Some designs feature tamper-resistant packaging while others may include small keypads to allow entry of a PIN or a simple button to start a generating routine with some display capability to show a generated key number. Special designs include a USB connector, RFID functions or Bluetooth wireless interface to enable transfer of a generated key number sequence to a client system. This book is your ultimate resource for Security Tokens. Here you will find the most up-to-date information, analysis, background, and everything you need to know.
