Lessons amid the Rubble Sarah

K.A. Pfatteicher,2010-10-15 The aftermath of September 11 2001 brought the subject of engineering failure forensics to public attention as had no previous catastrophe In keeping with the engineering profession s long tradition of building a positive future out of disasters Lessons amid the Rubble uses the collapse of the World Trade Center towers to explore the nature and future of engineering education in the United States Sarah K A Pfatteicher draws on historical and current practice in engineering design construction and curricula to discuss how engineers should conceive organize and execute a search for the reasons behind the failure of man made structures Her survey traces the analytical journey engineers take after a disaster and discusses the technical social and moral implications of their work After providing an overview of the investigations into the collapse of the Twin Towers Pfatteicher explores six related events to reveal deceptively simple lessons about the engineering enterprise each of which embodies an ethical dilemma at the heart of the profession In tying these themes together Pfatteicher highlights issues of professionalism and professional identity infused in engineering education and encourages an explicit direct conversation about their meaning Sophisticated and engagingly written this volume combines history engineering ethics and philosophy to provoke a deep discussion about the symbolic meaning of buildings and other structures and the nature of engineering

Forensic Human Factors and Ergonomics Michael S.

Wogalter,2018-09-03 This book has 18 case study chapters investigating various injury scenarios through the use of a Human Factors and Ergonomics HFE analysis Each injury scenario derives from one or more similar lawsuits but names places and some of the details are fictionalized The scenarios describe a slice of life of people interacting with products equipment tasks

and environments before they are seriously hurt The forensic analysis that follows each scenario gives a background of prior similar events and systematically examines potential causes leading to the injury event There is emphasis on the person machine interface human error hazard analysis hazard control and a model of communication human information processing C HIP Chapters are authored by highly experienced expert witnesses in HFE The methods used are general techniques that can be applied to other injury scenarios but would be better if employed earlier in a product s life cycle to prevent or limit injury The first three chapters introduce concepts useful for the analyses in the case study chapters The last chapter offers some broad take away points that cut across several of the case studies Features contributions by persons who have extensive experience in HFE and who have served professionally in the role of an expert witness in various legal cases mostly in product liability Gives a broad range of situations to illustrate where HFE considerations could improve product or environmental safety There is an emphasis on children caregivers and adult activities such as driving Uses mitigation strategies to reduce the likelihood of occurrence and severity of adverse events Includes a first person scenario at the beginning of each chapter Allows the lessons learned to be adaptable to other domains where people interact with products and environments

The Problem of Health Technology Pascale Lehoux,2014-06-03

Health technology is a pivotal locus of change and controversy in health care systems and The Problem of Health Technology offers a comprehensive and novel analysis of the topic The book illuminates the scientific and policy arguments that are currently deployed in industrialized

countries by addressing the perspectives of clinicians health care managers scholars policymakers patients and industry And by establishing a dialogue between two interdisciplinary fields Health Technology Assessment and Science and Technology Studies Pascale Lehoux argues for re centering the debate around social and political questions rather than questions of affordability thereby developing an alternative framework for thinking about the implications of health technology

Electronic Design ,1994 Patterns in Safety Thinking Geoffrey R. McIntyre,2000 Safety is more than the absence of accidents Safety has the goal of transforming the levels of risk that are inherent in all human activity while its interdisciplinary nature extends its influence far into most corporate management and government regulatory actions Yet few engineers have attended a safety course conference or even a lecture in the area suggesting that those responsible for the safe construction and operation of complex high risk socio technical systems are inadequately prepared This book is designed to meet the expressed needs of aviation safety management trainees for a practical and concise education supplement to the safety literature Written in a highly readable and accessible style its features include detailed analysis of the forward looking System Safety approach with its focus on accident prevention classification of transportation safety literature into distinct schools of thought Tort Law Reliability Engineering System Safety Engineering real world practical illustrations of the theory the history theory and practice of safety management inter disciplinary thinking about safety The flying public is faced with a bewildering array of aviation safety data from a diverse and ever increasing number of sources This book is an essential guide to the available information and a major contribution to the international public debate on aviation safety Research on Managing Groups and Teams ,2000 **Subject Guide to Books in Print** ,2001 *Small Press Record of Books in Print* Len Fulton,1993 *International Directory of Little Magazines & Small Presses* Len Fulton,2003 International Directory of Little Magazines and Small Presses, 30th Ed, 1994-1995 Len Fukton,Len Fulton,1994-10 **America, History and Life** ,1996 Provides historical coverage of the United States and Canada from prehistory to the present Includes information abstracted from over 2 000 journals published worldwide **The Cumulative Book Index** ,1999 **Engineering/technology Management ...** ,2003 **Handbook of Applied Cognition** Raymond S. Nickerson,1999-07-09 Cognitive psychology is the basis of many applications in almost every area of technology business industry and education This book provides workers in applied arenas with presentations of research aimed directly at the problems and issues that confront them It will cover key areas including business and industry computers and technology education and information and health and law **Human-Automation Interaction** Mustapha Mouloua,Jefferson M. Koonce,1997-02 Research and development in the field of man machine systems has evolved tremendously in the last 20 years For almost every man machine system whether in the aviation industry medical systems industrial process control or just for use in leisure activities or the home environment it is possible to see many automated systems and devices that have replaced the human component as a key element The fast evolution in computer technology

has transformed the course of our daily lives by making these technological innovations a viable option on which to rely. These varied technological advances have reduced the burden of excessive physical and cognitive demands imposed upon human operators. However, they have also resulted in several behavior-related problems such as a loss in situation awareness, increased mental workload, monitoring inefficiency, and inability to revert to manual control under systems malfunction. Covering a wide variety of human factors issues across several domains of application, this volume represents a snapshot of a series of experimental and investigative studies concerned with the impact of automation technology on human performance. The topics addressed deal with both theoretical and applied issues. Although more emphasis was placed on the aviation industry, several other human-machine systems where automation technology is implemented are also represented. This book enables students, scientists, and researchers from a variety of fields such as academia, government, and industry to achieve the following: review and update their basic and applied knowledge in several domains where automation technology is implemented; review and evaluate recent empirical studies on automation and human performance across several domains; address training issues and guidelines for the design of intelligent hybrid human-machine systems; and discuss future trends in automation research applicable to the 21st century.

Internal Bleeding Robert M. Wachter, Kaveh G. Shojania, 2004. Imagine an epidemic that kills over one hundred Americans every day. Now stop imagining. Each year, doctors and nurses kill nearly one hundred thousand Americans. By mistake. They operate on the wrong patients, prescribe the wrong drugs, and leave instruments inside body cavities after surgery. Meanwhile, hospitals spend billions on new gadgets, marble lobbies, and slick billboards, even as safety continues to be ignored. Until now, *Internal Bleeding* exposes the dark secrets behind the glistening facade of modern medicine. Doctors Robert Wachter and Kaveh Shojania, professors at one of America's leading medical schools and two of the world's foremost authorities on medical mistakes, shatter the silence to tell the dramatic and compelling stories of real patients betrayed by a system they trusted to save them. Through these stories, the authors reveal the inner workings, gut-wrenching dilemmas, and heartbreaking tragedies of our overburdened, understaffed health care system. *Internal Bleeding* provides an insider's view of how professional caregivers think, feel, and operate—facts that every patient and family must know to avoid becoming just another mistake. In the groundbreaking tradition of *Fast Food Nation*, *Internal Bleeding* paints a vivid and unforgettable picture of a system gone terribly wrong and what doctors, nurses, hospital CEOs, and policy makers must do to make it right.
